SUBJECT: CINDA EXFOR Lines

NNDC would like to have a mechanism for entering lines into CINDA for EXFOR data entries which are in process and not yet transmitted. We can do this internally, however, it may be useful to the other centers and to customers to have this information, since this data can be requested even if it is not in final form.

There are two possible solutions:

1. Enter as normal hierarchy 6 data with the comment: ".In process". This would then appear in the book.
2. Invent a hierarchy 7 for data not yet transmitted. This would not appear in the book.

We prefer the first solution. We feel it will be useful to users to have this information because in most cases the data will have been transmitted by the time the book is distributed.
