Dictionary 41

For the purpose of making the translation of ISO-QUANT to REACTION easier, we propose the following format change for Dictionary 41.

The format of the dictionary is as follows:

col. 1-18: quantity code, as given in dictionary 14.

*19-20: integer specifying difference between
         Z of target and Z of reaction product.

*21-22: integer specifying difference between
         A of target and A of reaction product.

23-66:   equivalent reaction code, including
         enclosing parentheses, and free text.

* A blank in these fields signifies that reaction product is not given.
