MEMO CP-C/82

Date: February 3, 1981
From: Victoria McLane
Subject: Monitor Coding
Reference: Memo 4 C - 2/114

The metastable state extension - G+M is equivalent to no extension and is meant to be used for the case in which the ground and metastable state data have been determined independently and are summed to give the total value.

Therefore, for such standard codes given in Memo 4C-2/114, the reaction product should, in most cases, have no extension.
