Memo CP-C/225

DATE: February 12, 1997  
TO: Distribution  
FROM: V.McLane *VM*  
SUBJECT: Incident source code Dictionary 19

The code string associated with MPH= is hard to check because there is no delimiter between the code and its attached reaction string. I propose the following updates to Dictionary 19 to facilitate machine processing of this code and other codes in this dictionary.

1. Add a "delimiter field" to Dictionary 19 (column 66 in the EXFOR dictionaries, field 3 (A1) in the archive dictionaries). This field would contain a delimiter which may occur after the code. The checking code could then print a warning message about a possible missing field, as it does now for POLNS.
2. Delete the code MPH= from Dictionary 19.
3. Add to the code MPH in Dictionary 19 the delimiter '='.
4. Add to the code POLNS in Dictionary 19 the delimiter ',,'.
