Subject : Parameter Code "INT"

Reference: CP-N/5 of 20 May 1980  
CP-C/87 of 23 April 1981

---

I wish to apologize that our entering of the code "INT" into Dictionary 32 was perhaps premature.

We would like to propose to keep this code but to restrict its use to the following cases proposed by NEA-DB and NNDC:

"INT - Cross-section integral between specified energy limits, in units of B\*EV. This code is to be used in exceptional cases only, e.g.

- when data are normalized by means of an integral over a specified energy range of the cross-section curve;
- when the energy ranges given are commonly used for intercomparison of data;
- when differential data are not available.

Compilation of such data is not compulsory.

This code is not to be used for data from integral experiments."

Clearance: for *J.J. Schmidt*
