

Memo CP-D/105

1982-03-11

To: Distribution

From: H.D. Lemmel *Lemmel*

Subject: EXFOR re-transmissions: "Entry" or "Subentry" as minimum unit?

Reference: Memo CP-A/1 received 82/3/5

Note: The number of this memo should probably read CP-A/29

We suggest to discuss this item, whether the minimum Exfor unit transmitted should be an entry or a subentry, on the forthcoming data centers meeting.

For neutron data, where there may be subentries with several thousand data lines, the problem is different from the case of charged-particle data where the maximum size of a subentry is much smaller.

In both cases, however, we regard it as essential that the changes made in the entry being retransmitted, can be recognized easily.
