Status of new compilation and procedure for creation CINDA reference

During two years we created several suggestions (WP2007-17, WP2008-12) of supporting CINDA DB.

Summarizing them we suggest to update CINDA through:

1. automatic export from EXFOR DB (by V.Zerkin's program);
2. addition CINDA lines manually (if somebody wish);
3. creation of "dummy" EXFOR file that can be added to CINDA DB after conversion to CINDA line (by V.Zerkin's program).

Just to remind: "dummy" EXFOR entry contains information needed for CINDA database:

- Reaction code
- Laboratory
- Reference
- First author
- Incident energy range

Now we still have gaps in compilation, that needs CINDA lines creation.

The whole EXFOR compilation statistics of this year is:

year	Registered on the web	Compiled in EXFOR	Still in Prelim.file	allocated for compilation	Additionally registered on the Web	comments
2006	313	283	5	8	17	
2007	419	360	10	20	29	
2008	320	283	6	18	13	20 from NNDC
2009	296	201	30	31	27
