

ANALYSIS OF EXFOR OUTLIERS

IAEA

VIDYA DEVI
CONSULTANT

IAEA NUCLEAR DATA SECTION

**IAEA Technical Meeting, June 14-17, 2022
Vienna, Austria**

Introduction

Scope Review of the production cross-section of a, d, g, h, p, and t induced reactions in validation of TENDL-2021 curves.

Method Observing each plot received from Arjan Koning one-by-one along with the source article and web retrieval system.

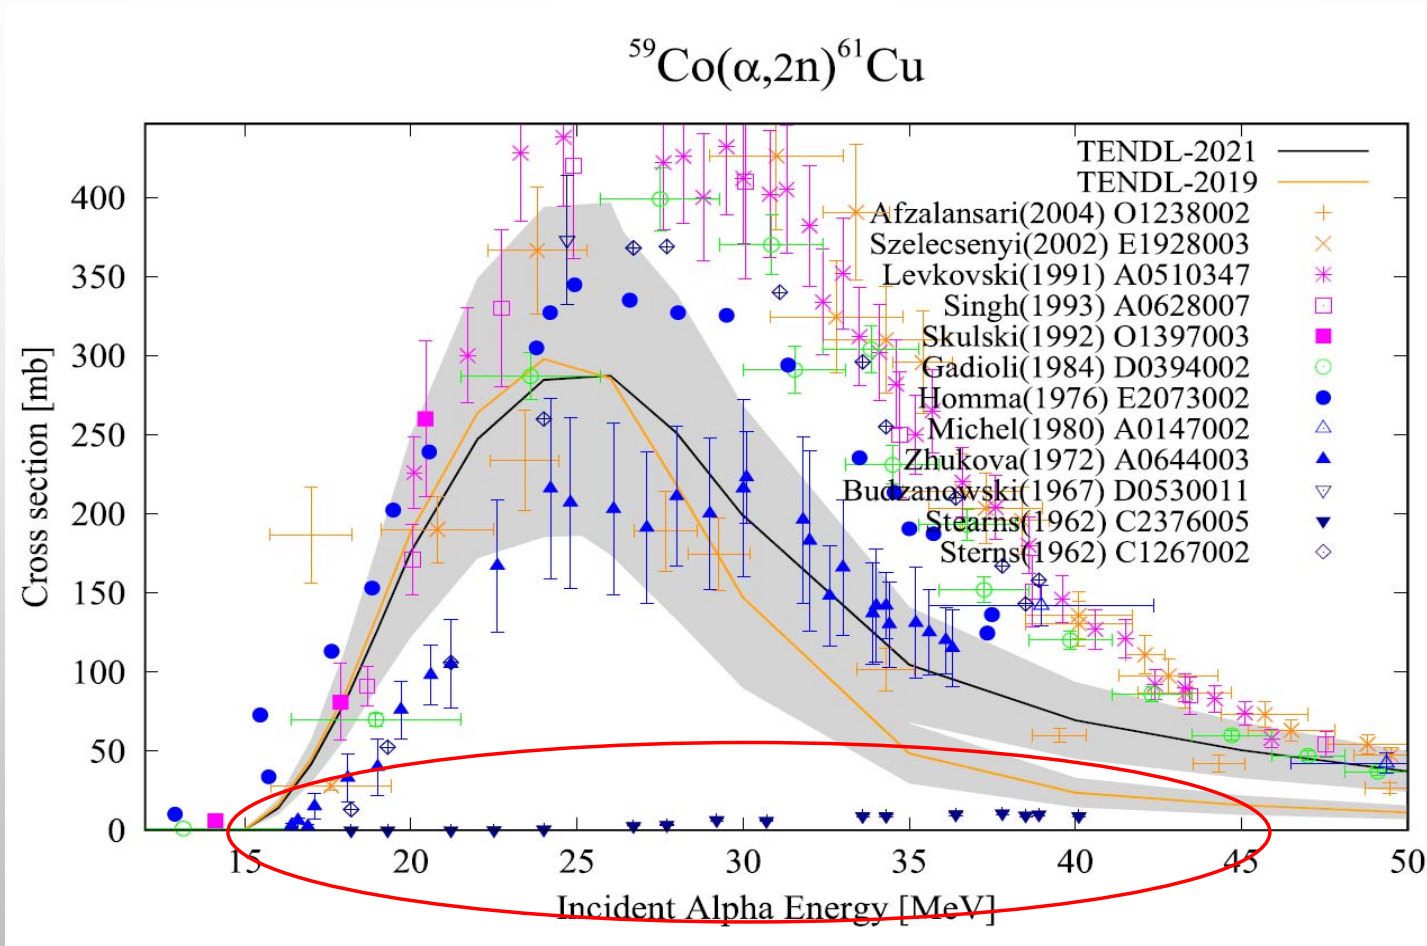

The suspicious cases, not evident from Arjan's plot, were also checked whenever needs arise.

Current situation The review of a, d and g induced reactions have been completed.

SAMPLE The targets were prepared by electrodeposition of
spectroscopically pure cobalt onto one-half mil gold
foils from a cobalt-ethylene-diamine solution. The
targets varied from 0.5 to 2 mg/cm2 in thickness, and
each target was uniform to +-2%.

TABLE III. Results of the activation experiment. For each α -particle energy, the measured cross-section values for the different γ -ray transitions are shown. The last column shows the weighted average of the obtained cross sections.

E_α [keV]	E_γ [keV]	σ [μ b]	$\bar{\sigma}$ [μ b]
14091 \pm 28	605	48.4 \pm 17.4	30.4 \pm 8.8
	407	35.3 \pm 10.5	
	371	25.4 \pm 7.4	
	605	11.1 \pm 2.4	
	569	11.3 \pm 3.1	
13689 \pm 28	558	12.4 \pm 3.2	9.9 \pm 2.0
	518	9.6 \pm 2.6	
	407	8.2 \pm 2.4	
13286 \pm 29	371	7.4 \pm 2.5	4.97 \pm 1.12
	605	6.9 \pm 2.0	
	407	4.3 \pm 1.7	
12785 \pm 29	371	4.4 \pm 1.4	1.13 \pm 0.29
	605	1.68 \pm 0.71	
12384 \pm 29	407	1.10 \pm 0.30	0.85 \pm 0.19
	371	1.03 \pm 0.40	
	605	0.68 \pm 0.21	
	407	1.27 \pm 0.35	

As mentioned earlier, the $^{187}\text{Re}(\alpha,n)$ cross section is almost only sensitive to the α width in the measured energy range. Thus, deviations of theoretical predictions obtained by statistical-model calculations from the measured values are

$^{51}\text{V}(\alpha, n)^{54}\text{Mn}$ 

Wrong y-scale

The scale on Y-axis (i.e., cross section) has been wrongly mentioned. 10^{-1} should come in place of 10^0 and hence the subsequent values (confirmed by the author)

Should compiler convert a excitation function in arbitrary unit to the absolute one when the authors report the absolute value at one energy ?

```

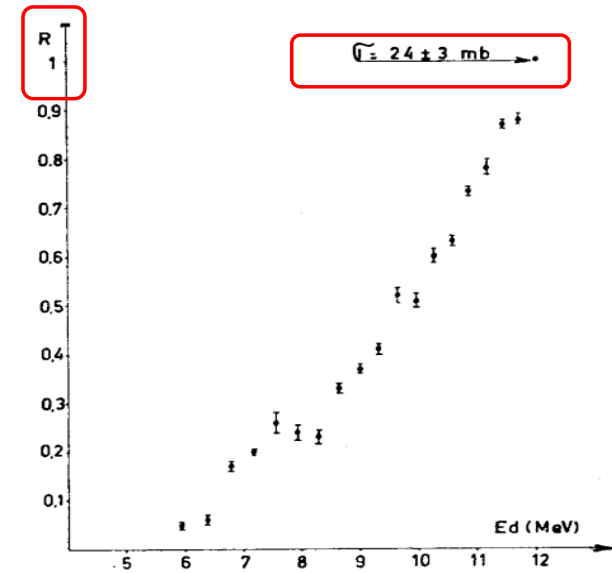

Fig. 8. Excitation function for the $^{58}\text{Ni}(d, t)^{57}\text{Ni}$ reaction.

Conclusion

- The main issue in many entries is in the REACTION code
- Wrong unit selection is also evident in many entries.
- Inclusion of data points belonging to another subentry.
- In some entries (mostly old), cross section values were compiled after mathematical operations. We now avoid performing such mathematical operations on any data provided by the author in the article. In such type of data, the respective centre should take the responsibility to correct that data.

Future Plan

- This review will be continued for the h, p and t induced reactions.
- We will also prepare a correction list and upload it in the feedback list for the correction.

ACKNOWLEDGEMENT

I would like to thank Naohiko, Arjan and Viktor for the fruitful discussions.

THANK YOU
FOR YOUR KIND ATTENTION
