

Definition of TRANS N2 (date) and time stamp on NDS open area

(N. Otsuka 2023-08-25, CP-D/1089)

Note added to WP2024-25:

I would like to seek your permission to overwrite the TRANS N2 with the date when I deposit a final TRANS tape to the NDS open area, for example,

```
TRANS          L052   20240506                      L000000000000
=>
TRANS          L052   20240507                      L000000000000
```

Definition of TRANS N2

We agreed in the last NRDC meeting that a master must be reproduceable by a centre other than NDS. A new master will be produced from its precursor by adding all trans tapes issued after the precursor. To identify the trans tapes issued after the precursor without ambiguity, the date of issuance must be clearly indicated in each trans tape. I believe TRANS N2 (date) is useful for this purpose.

To check this possibility, I investigated the situation for the trans tapes and backup files issued in May 2023. We observe TRANS N2 is always between the dates of the two backups except for TRANS.O094. (It was created on 17 April but uploaded to the NDS open area on 23 May, which was after production of the 15 May version of the backup file.).

The current formats manual defines TRANS N2 as “the date (year, month, and day) on which the exchange file was *generated*.”. I suggest replacement of “generated” with “deposited to the NDS open area”.

Timestamps of files on NDS open area

The timestamp of a file may be altered when it is copied from the NDS open area to another storage, and we cannot rely on it. Nevertheless, the timestamp also should reflect the actual date of issuance. I found **many trans tapes had timestamp of 11 Sept. 2007 on the NDS open area**. I guess they were altered when they were migrated in 2007 from the previous NDS open area (hosted by the VMS server, ndsalpha.iaea.org). Fortunately, the original timestamps are preserved in the files rescued from the VMS server by Viktor Zerkin, and **I used them for restoration of the timestamps of the files on the current NDS open area** (hosted by the Linux server, nds.iaea.org). A summary of the timestamp on the Linux NDS open area (before restoration) and the VMS open area is appended to this memo.

Note that I confirmed the two files (VMS and Linux versions) have the same contents with a few exceptions, for which the file rescued from the VMS open area is in a strange format, and not understandable for me. They are indicated by “Comparison of the two versions impossible.” In the appended table. During this comparison, I occasionally found the following erroneous records on the files on the current NDS open area.

- TRANS.2174 21177.013 Seq.4 (characters after col.80)
- TRANS.4123 40828.002 Seq.24 to 95 (characters after col.80)
- TRANS.9089 Dictionary 36 Seq.1544 (tab is used)

They are fixed in the current versions of these subentries and dictionary.

Timestamps on the Linux NDS open area (*before alteration*) and on the VMS NDS open area

Trans ID	Linux		VMS		Remark
