Nuclear Reaction Data
Centres (NRDC)

EXPERIMENTAL NUCLEAR REACTION DATA LIBRARY EXFOR

EXFOR: THE FORMAT

EXFOR=EXchange FORmat

was agreed for the data exchange between four Neutron Data Centres in 1969. Nowadays 13 members of the International Network of Nuclear Reaction Data Centres (NRDC) compile and maintain data for EXFOR under coordination of the IAEA Nuclear Data Section (NDS).

is machine-readable format for checking and for further data processing. EXFOR includes dictionaries and rules.

can be read by a human.

EXFOR: THE LIBRARY ITSELF

stores the experimental nuclear reaction data on interactions of neutrons, charged particles, photons.

stores numeric data, bibliographic information and experimental information about the data, the source of the data and history. EXFOR includes more than 22 000 descriptions of experiments and 15 000 000 data points (as of January 2018).

stores various nuclear reaction quantities such as cross section, differential cross section (e.g., angular distribution, energy spectrum), double differential cross section, resonance parameter, fission product yield, fission neutron multiplicity.

is the basis for the majority of the evaluated nuclear reaction data libraries.

EXFOR: THE IAEA NDS RETRIEVAL SYSTEM

is the effective processing system. IAEA EXFOR Web Service is <http://www-nds.iaea.org/exfor/>. Several search criteria such as target, reaction, quantities, products, energies, information about experiment, bibliographic reference, text-patterns and keywords are provided. Autonomous CD version of the EXFOR Library with retrieval system is regularly issued by NDS.

offers the original format (X4) and several end-user formats for different needs. The "interpreted" formats (X4+, X4±, X4XML) give the user explanations of the internal codes and abbreviations and provide access to experimental data in formats appropriate for users. The "computational" formats (C4, C5, C5M) deliver data from EXFOR to users in format simple for software development.

displays data on graphs in static and interactive plots with option for uploading of users' data for comparison with the possibilities of drag-and-drop zoom, lin/log scaling, copy/paste data between systems and output to: PS, PDF, animated GIF, Html, ENDF-6, Fortran data.

provides the following services: on-line recalculations of cross sections, inverse reactions and inverse kinematics for angular distributions, automatic re-normalization, user's corrections, experts' corrections, constructing a covariance matrix from EXFOR uncertainties.
