

### **Suspicious EXFOR entries**

This summer Arjan Koning sent a list of 55 suspicious EXFOR subentries to us at NDS. (It is the same list of EXFOR subentries which was given in th Working Paper WP2006-3 on the last meeting).

We checked it and below we summarize the results. Both Arjan's input and our detailed reply are attached to this message.

Our checking can be summarized as follows:

- From the list of 55 suspicious subentries, 36 turned out to be correct (in the sense that EXFOR correctly reports the published results). In 7 of these cases, the C4 computational format generates impossible cosines (<-1 or >1) where EXFOR has ordinary angles in degrees. This is probably something for Andrej Trkov to look at, it is not a problem of the EXFOR database.
- 16 cases are actual errors in EXFOR, mostly wrong units. Most corrections were already performed locally and will appear in the next database upgrade. See the attached list for details.
- From the 3 remaining cases, one continues to be suspicious but cannot be resolved for lack of information, 1 will be checked in August, and one is a question of digitizing uncertainty. See attachment for details.

This was an interesting exercise because it shows us a typical pattern of EXFOR data which appear problematic:

- 1 - Some data are actually wrong, most often because of wrong units (b vs. mb etc.)
- 2 - Incorrect translation from EXFOR to computational format C4
- 3 - Unclear interpretation of the EXFOR quantities
- 4 - Unusual (or questionable) published data, showing up in EXFOR as in the publication

The treatment of case 1 is straightforward - report mistakes to NDS, we will take care of corrections with the help of our data centres network. (In most cases this is straightforward, but occasionally the actual intention of the authors can no longer be verified, so we may not be able to actually change a suspicious number in the database, but only add a "footnote" pointing out a suspected mistake.)

While it is of course essential to find and correct all these mistakes, it is important to note that these cases (1) are a minority of the "suspicious" entries. After completion of the work of SG30, also cases (2) and (3) should no longer appear (and it will, in our opinion, remain the evaluators' job to decide what to do with cases (4)).

**Result of checking A. Koning's "List of suspicious EXFOR data" (sent to NDS on 29 June 2007)**

	<b>Subent</b>	<b>Error</b>	<b>reference</b>	<b>reaction</b>	<b>Decision</b>
1.	10772004	Suspicious data set: xs > 4 barn for E > 1 MeV	BAP,17,687(FD10), 7205	46-PD-110(N,2N)46-PD-109-M,,SIG	It is impossible to check. Data are from private comm. and Entry approved by author. Any way it is not just conversion from barn to millibarn. It is max. 10 times grater than other. <b>We cannot change the data, only add compiler's comment about our suspicion.</b>
2.	10876005	Suspicious data set: xs > 4 barn for E > 1 MeV	NP/A,332,297,79	47-AG-107(N,INL)47-AG-107,PAR,SIG (b)	Barn → MB <b>Error.</b> Corrected, will appear in web-EXFOR in August.
3.	11045002	Suspicious data set: Possible angle problem: cosine < -1 or > 1	PR,82,190,51	1-H-0(N,EL)1-H-0,,DA	<b>Not an error.</b> The same as in article 180 degr in c.m.
4.	11276019	Suspicious data set: xs > 4 barn for E > 1 MeV	P,COO-1573-33,2,67	29-CU-65(N,INL)29-CU-65,PAR,SIG	<b>Error.</b> Corrected, will appear in web-EXFOR in August.
5.	11286018	Suspicious data set: xs > 4 barn for E > 1 MeV	NP,53,177,6404	16-S-0(N,INL)16-S-32,PAR,SIG (b)	Barn → MB <b>Error.</b> Corrected, will appear in web- EXFOR in August.
6.	12797005	Suspicious data set: xs > 4 barn for E > 1 MeV	R,ANL-NDM-70,8207	41-NB-93(N,INL)41-NB-93,PAR,SIG (b)	Mistake in two points. <b>Error.</b> Corrected, will appear in web- EXFOR in August.
7.	20033003	Suspicious data set: xs > 4 barn	EANDC(OR)-38,1,6504	37-RB-85(N,2N)37-RB-84,,SIG (b)	Probably (MB) (NEA DB). <b>Will be checked in August.</b>
