EXFOR Maintenance Package Structure

```
x4load-w1
  └── winjre
      └── winprot.bat
          Java Runtime Environment for Windows
          Removes Read-Only protection from all files below (recursively)

  └── x4load2
      ├── conf
      ├── dsc
      ├── sql
      └── windows
          ├── x4main.bat
          ├── x4update.bat
          └── winx4cd.bat
              EXFOR Maintenance Package location
              Configuration files
              Dictionaries description
              SQL commands
              Contains main control scripts
              Main control script (can invoke others) [create icon]
              Script to control EXFOR updating by TRANS [create icon]
              Script to run CD-ROM program (from X4Java2) [create icon]
          ...
          ...

  └── x4dict
  └── X4Java2
  └── x4trans
  └── x4vms
  └── x4wrk
      ├── help
      ├── x4done.log
      └── Errors.htm
          Archival Dictionaries
          CD-ROM retrieval program (configured to see last updates)
          Default place to keep TRANS files (to be seen by the Package)
          Default place to keep VMS Master files (LB*.TXT ~840 files)
          Working place (with scripts, executables, temp-files, etc.)
          Html-help files (to be used on Web-Server)
          Text log file recording operations done
          Non-critical errors and warnings (concerning TRANS contents)
      ...
  └── x4acc1.mdb    Default Access-type EXFOR database
```
