Introduction of NDPlot

■ History

- Since 1990s, CNDC has been devoting to develop plotting software for nuclear data. The first window's plotting software named TT was released in 2002.
- TT is a Chinese abbreviation and short for “**Tong Tiao**（统调）”, it means comparison and adjustment.
- TT 's software structure is Client-Server.
- The sever has a database including ENDF and EXFOR.

Introduction of NDPlot

History

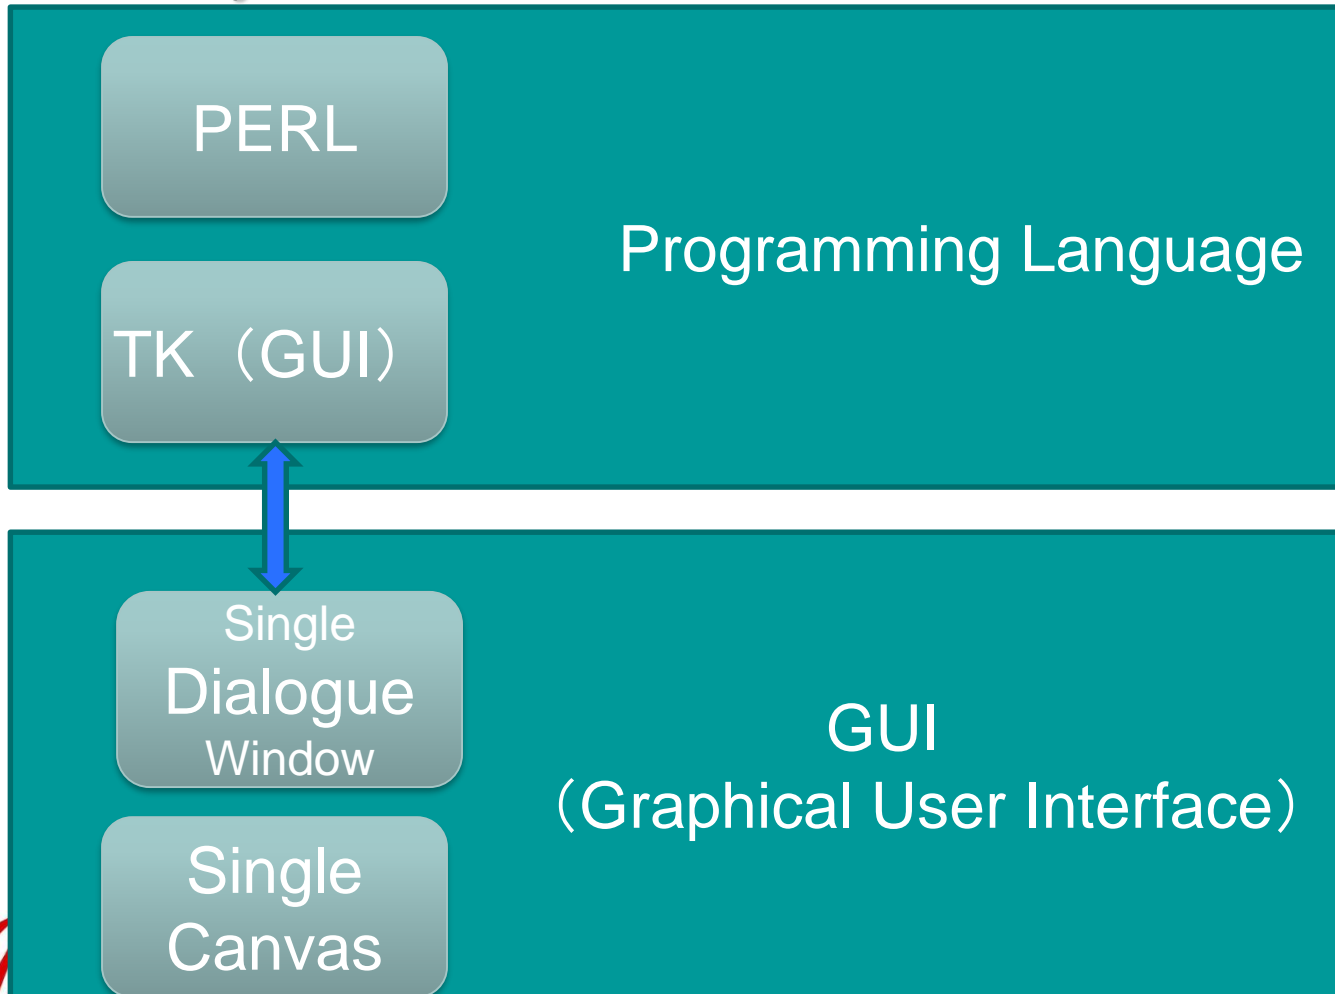

■ **TT example:**
 $^{56}\text{Fe}(n, 2n)$
reaction

Interface of TT

Introduction of NDPlot

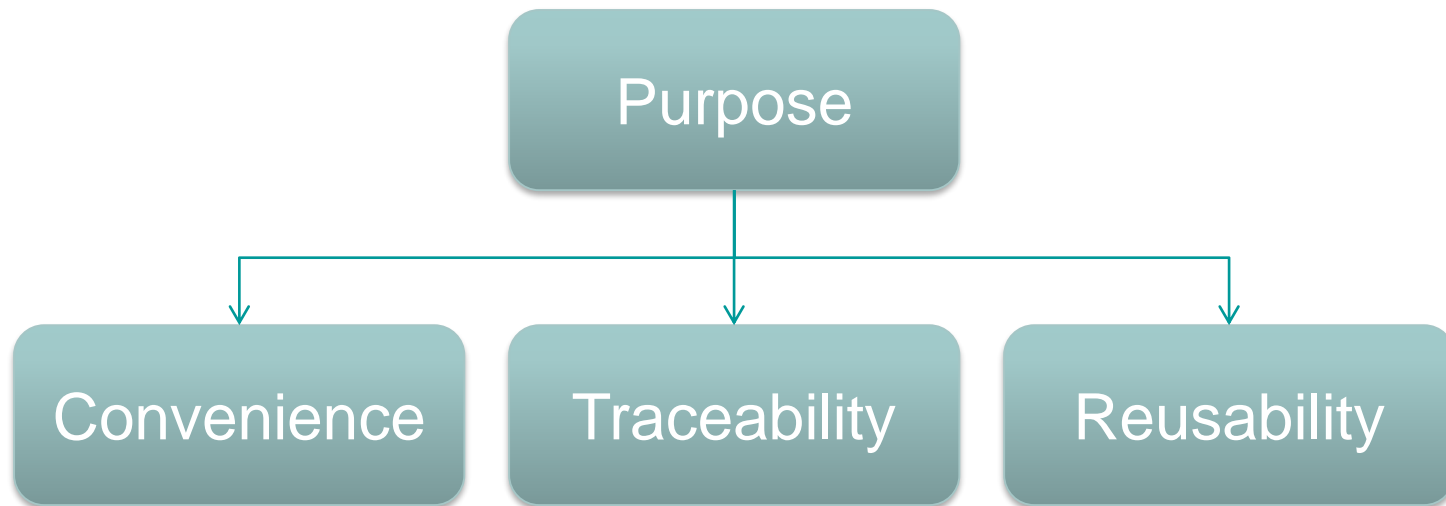

History

TT's Development Platform

Introduction of NDPlot

● **NDPlot** is a more efficient nuclear data plotting tool, It's not only a plotting tool, but also a Integrated application software. It can be seen as an updated version of TT.

Introduction of NDPlot

Convenience : Online, and All the experimental data and evaluated data are converted to uniform units

Traceability: lots of information can be stored in a project file, users can view it at anytime they want. Information include: original data, plotting data, coordinate system, annotations, remarks.

Reusability: You can save or continue the work at any time. Others can use the file to continue , examine or edit the file.

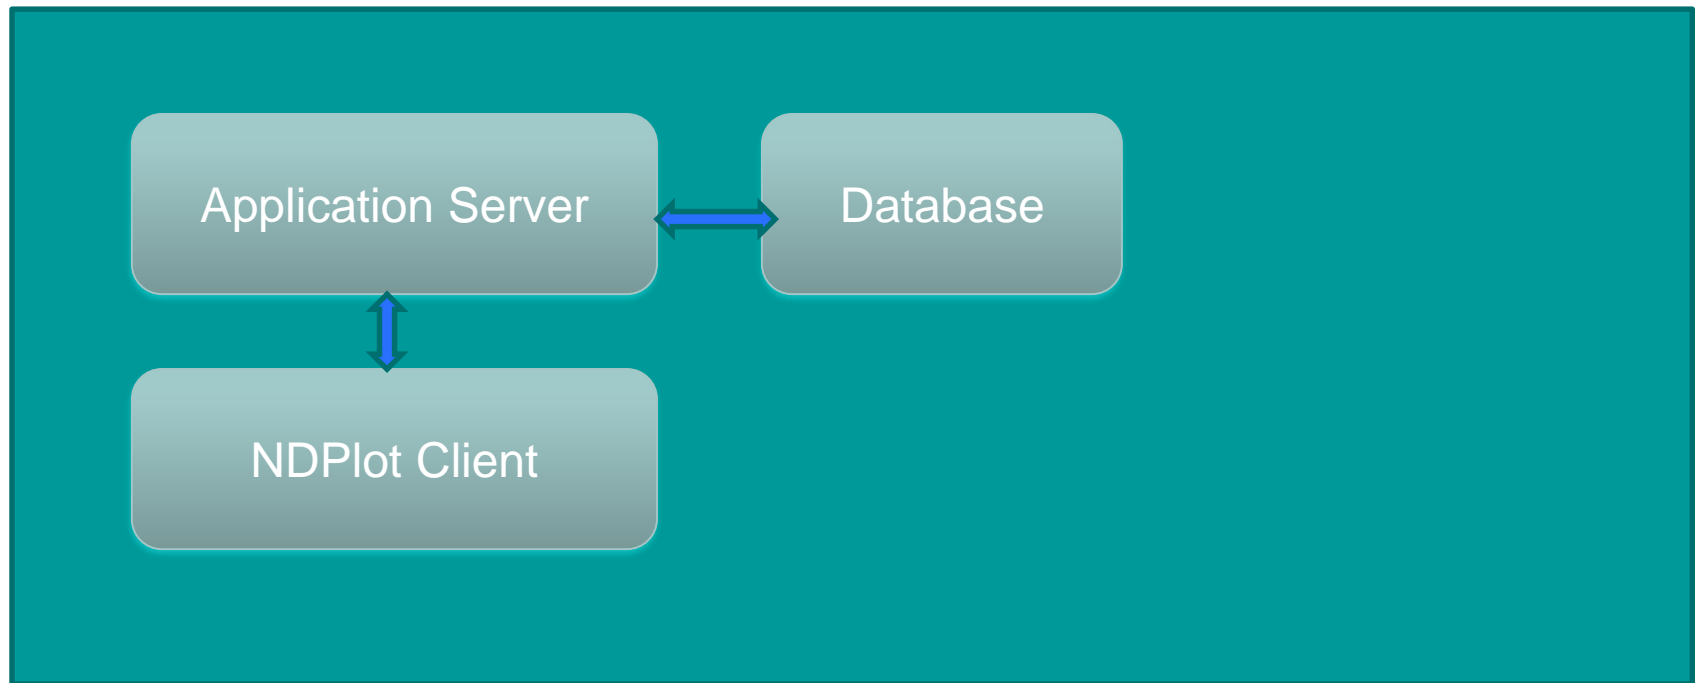

Introduction of NDPlot

Features of NDPlot

- Treatment of CS, DA, DE, DAE, **MFQ, FY** etc.;
- Using EXFOR, ENDF, and user-defined format data (free format);
- Saving project File;
- Exporting figures as jpg, eps, pdf, etc. ;
- Supporting Windows clipboard (word, ppt);
- Online retrieve & transfer the exp. and eval. data from the database.

Introduction of NDPlot

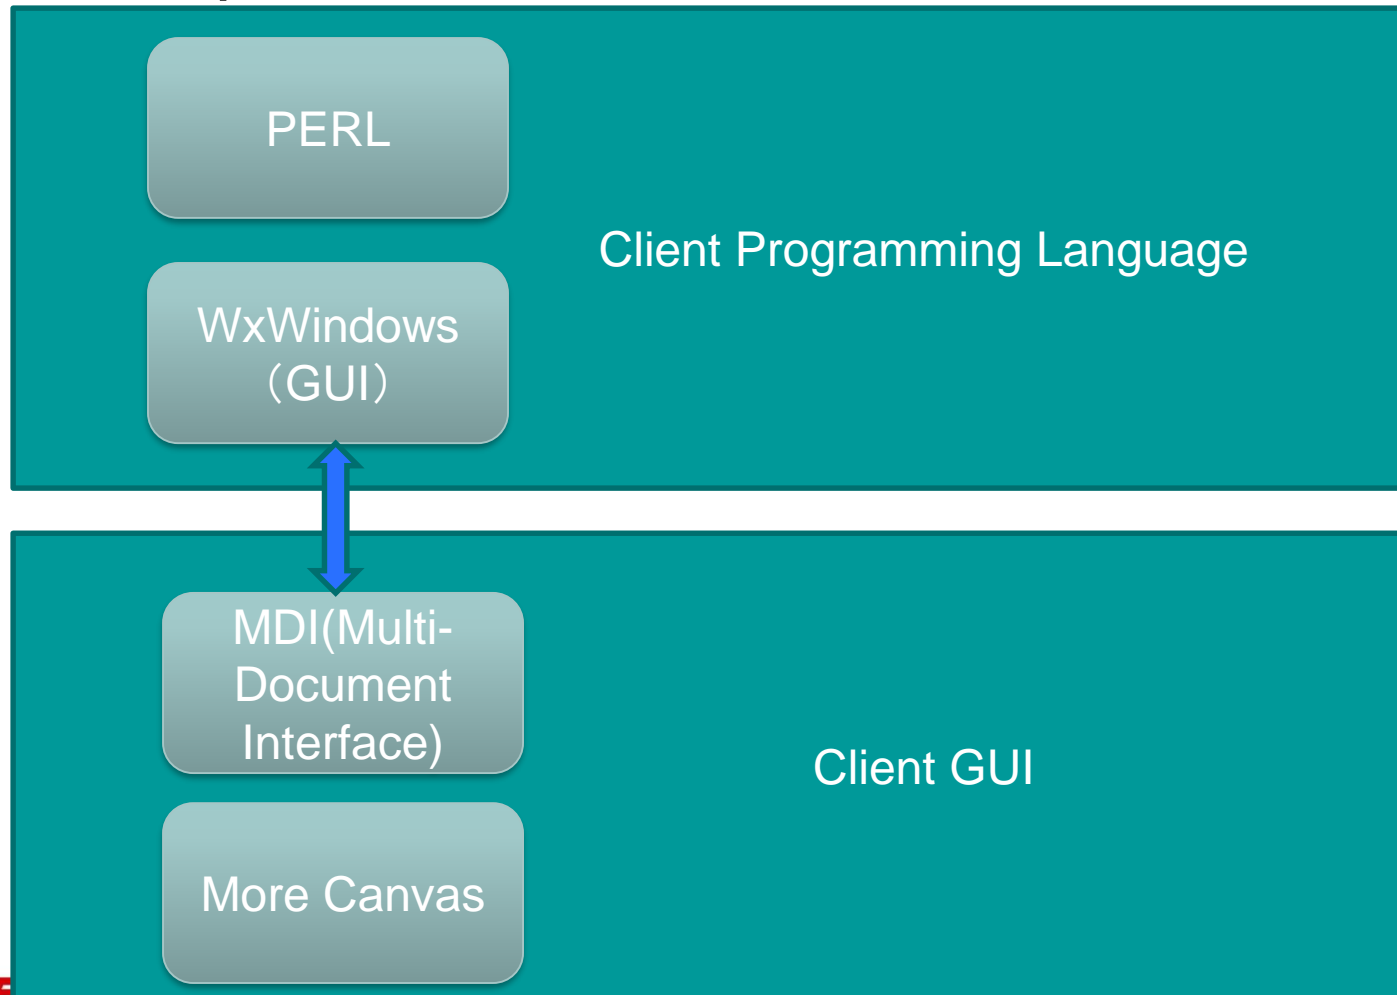

■ Architecture of NDPlot

Client-Server Structure

MainFrame:
Menu bar

ChildFrame:
Control Panel
Canvas

Introduction of NDPlot

■ Batch Plotting(DA,DE,DAE)

The screenshot shows the 'BatchPlotting' window with the following components:

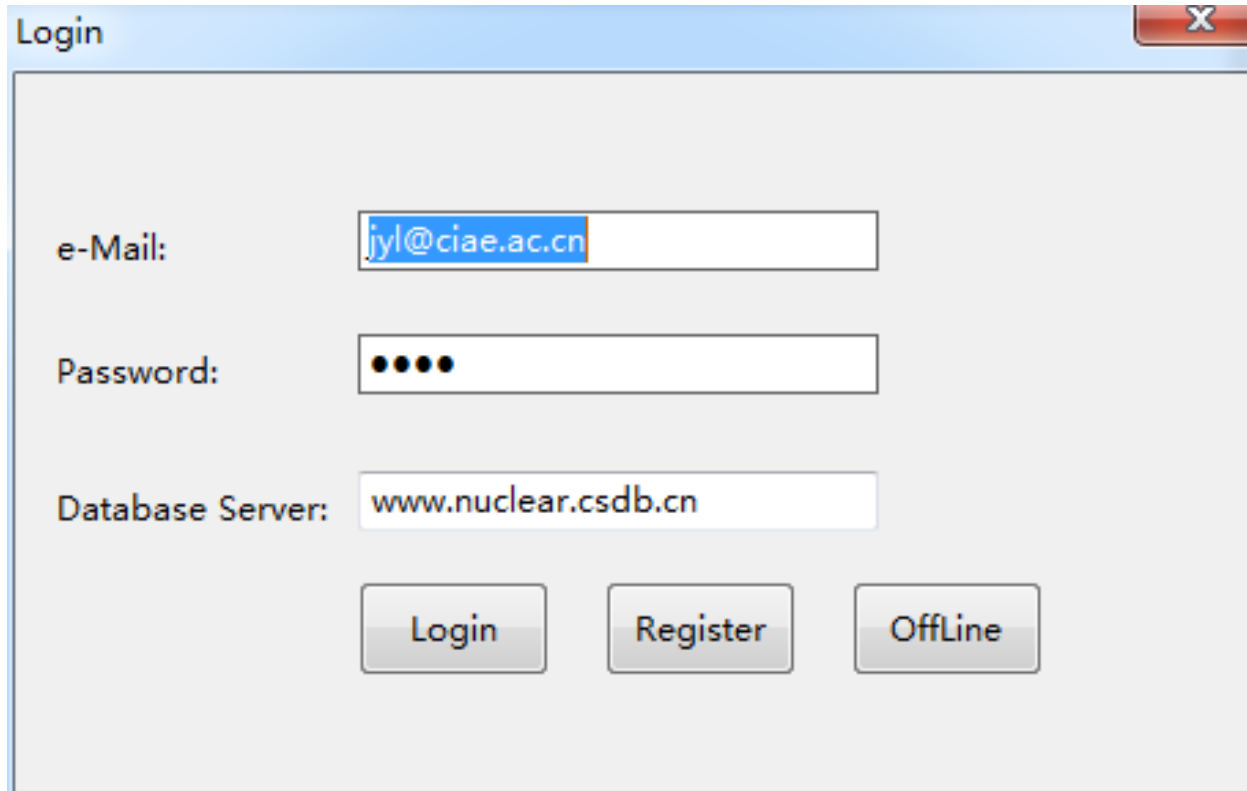

- Table:** A table with columns 'Choice', 'Evaluation Lib', and 'id'. The first row is selected.
- Parameters:** Z: 26, A: 56, G/M: G, and a checkbox for 'Download original data'.
- Local PENDF Pen File:** An empty text field with an 'Add PENDF File' button.
- Batch command,format as follows:** MF; MT ; En(Mev) ; Angle(Degree);Eo(Mev);Key
- Text Area:** A large empty text box for entering the batch command.
- Buttons:** 'Select from EXFOR', 'Save Batch File', 'Load Batch File', and 'Start'.
- Options:** A checkbox 'All data be plotted in one window' and a label 'Multiply a factor to differentiate the data' with an input field.

The data can be plotted in one or more windows.

It can plot more than one reaction at the same time.

Introduction of NDPlot

■ Register And Login

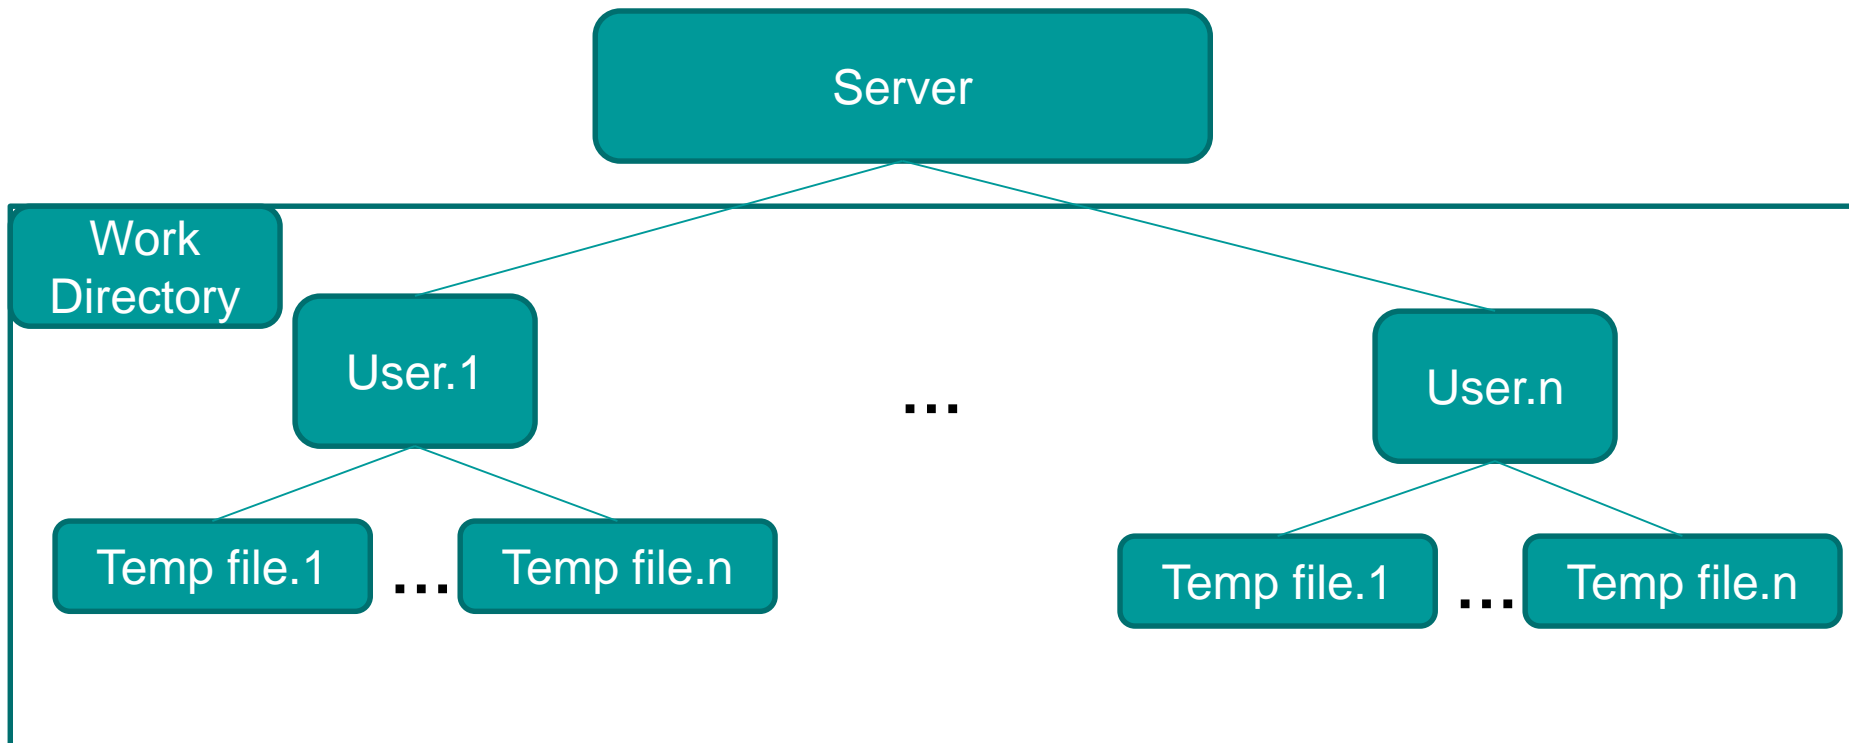

The screenshot shows a web browser window titled "Login". It contains three input fields and three buttons. The "e-Mail:" field contains "jyl@ciae.ac.cn". The "Password:" field contains five black dots. The "Database Server:" field contains "www.nuclear.csdb.cn". Below the fields are three buttons: "Login", "Register", and "OffLine".

e-Mail:	<input type="text" value="jyl@ciae.ac.cn"/>
Password:	<input type="password" value="•••••"/>
Database Server:	<input type="text" value="www.nuclear.csdb.cn"/>

Introduction of NDPlot

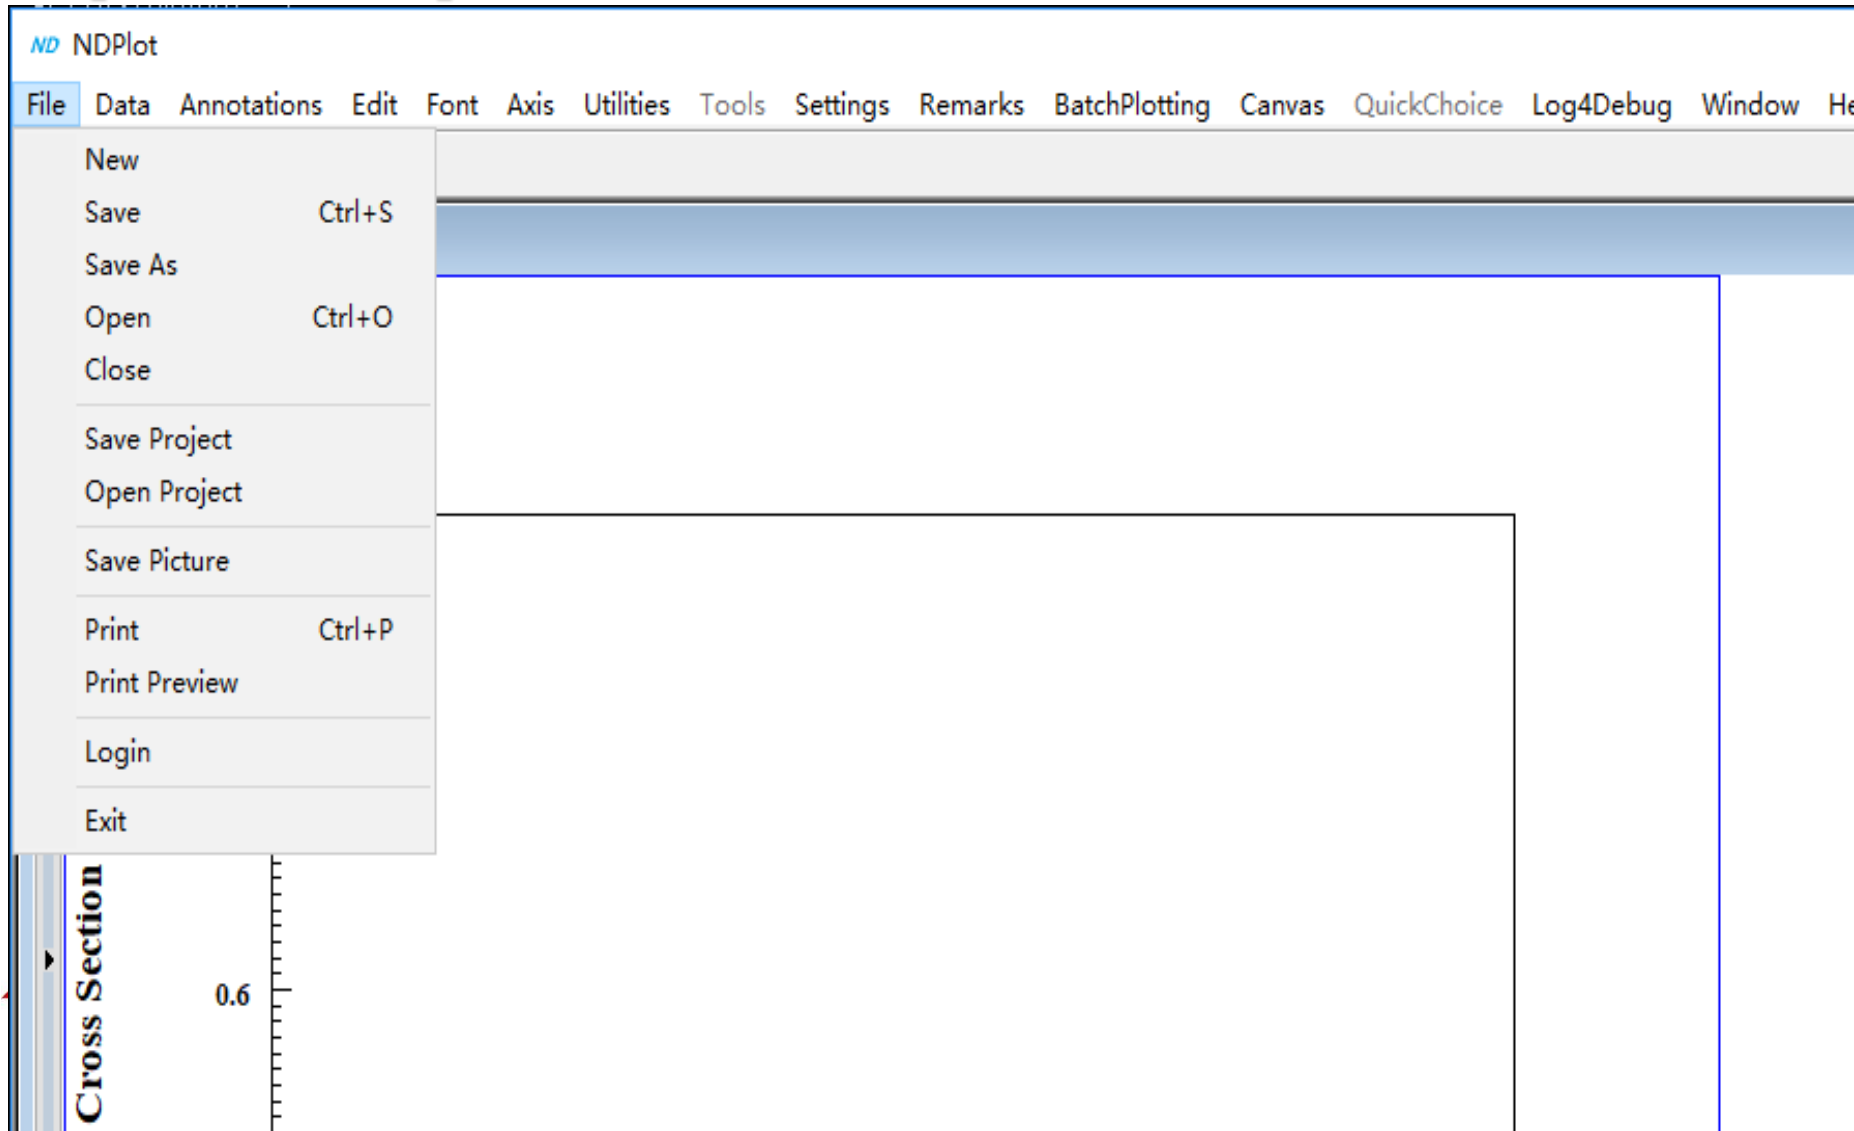

■ Why need to register?

Solving resource conflict on server side

Introduction of NDPlot

■ [File Menu]

Introduction of NDPlot

File->New: Create a new window (ChildFrame)

File->Save (AS) : Save current window (.ND) (Ctrl+S)

File->Open: Open a ND file(.ND) (Ctrl+O)

File->Save Project : All windows will be stored (.NDS)

File->Open Project: Open a project File (.NDS)

File->Close : Close Current ChildFrame.

File->Print Preview

File->Print (Ctrl+P)

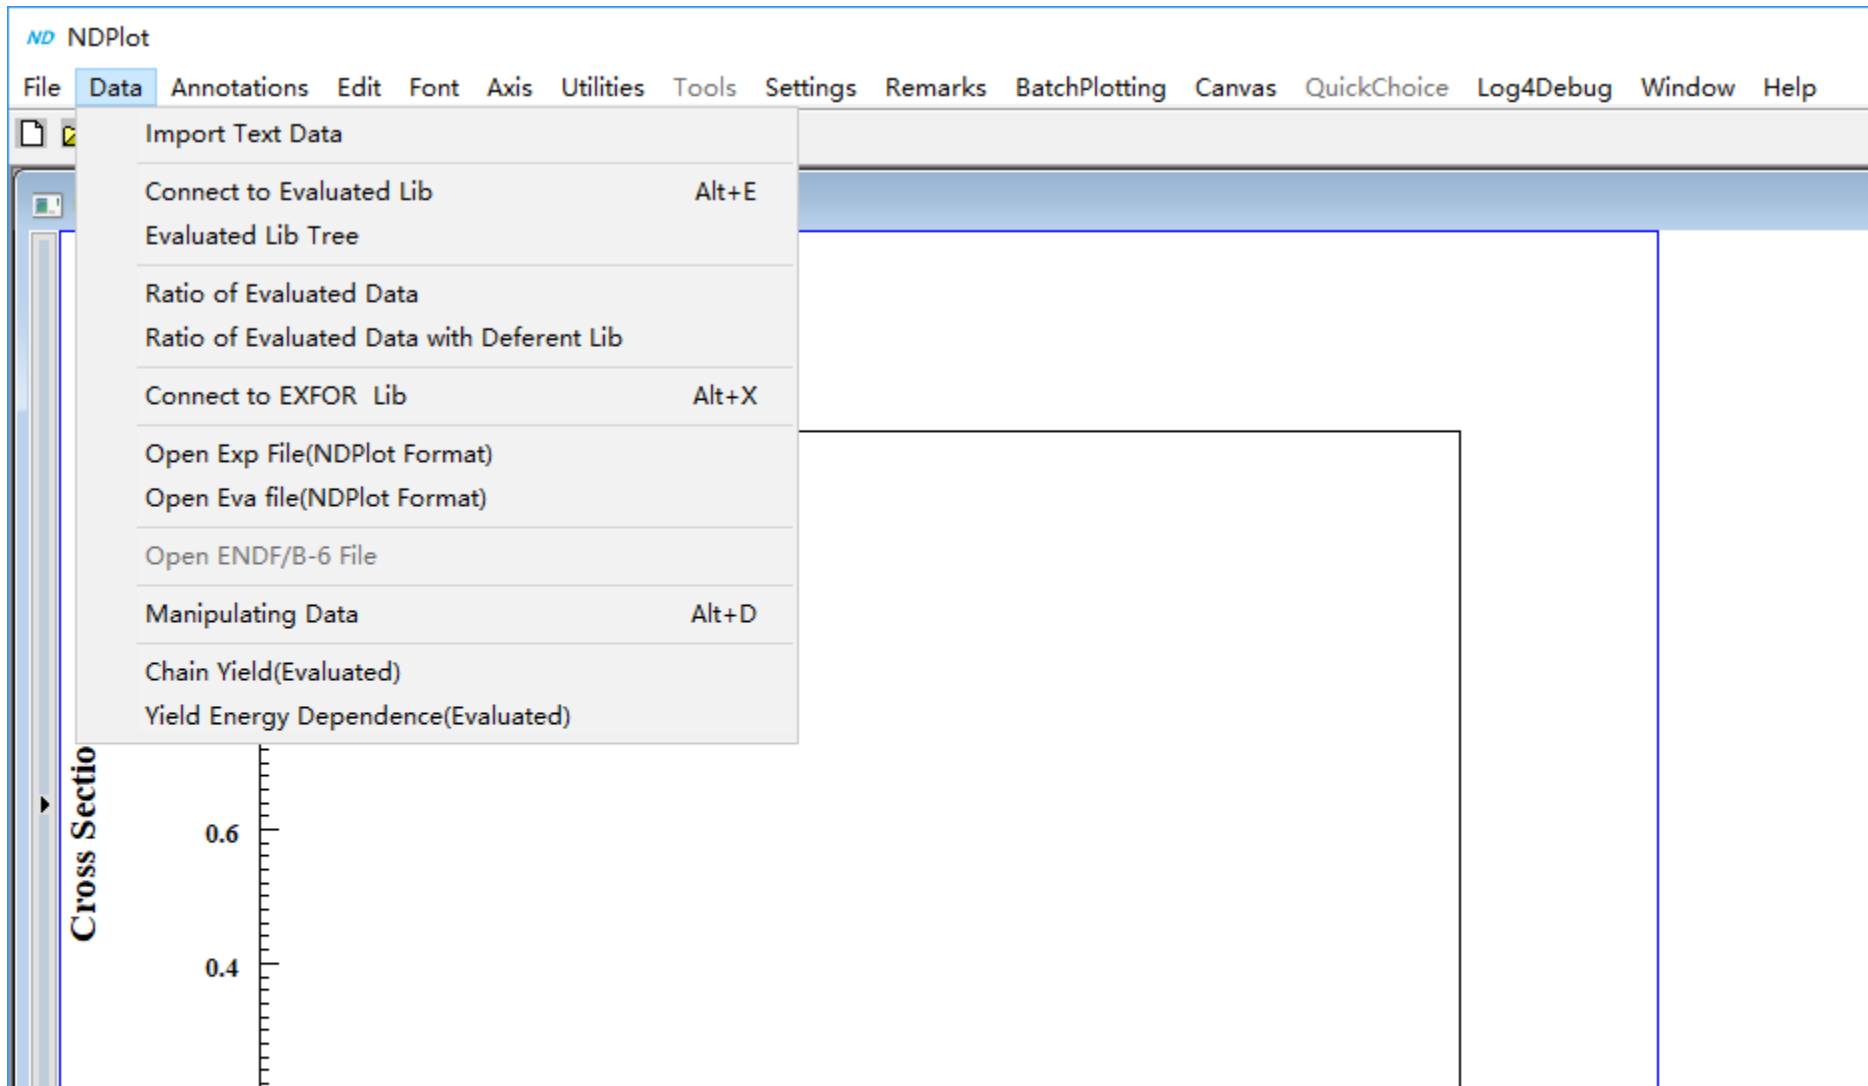

File->Save Picture: Output current window as a picture(JPG,BMP,GIF,PNG);

File->Login: Online

File->Exit

Introduction of NDPlot

■ [Data Menu]

The screenshot displays the NDPlot software interface. The title bar reads "ND NDPlot". The menu bar includes "File", "Data", "Annotations", "Edit", "Font", "Axis", "Utilities", "Tools", "Settings", "Remarks", "BatchPlotting", "Canvas", "QuickChoice", "Log4Debug", "Window", and "Help". The "Data" menu is open, showing the following options:

- Import Text Data
- Connect to Evaluated Lib Alt+E
- Evaluated Lib Tree
- Ratio of Evaluated Data
- Ratio of Evaluated Data with Deferent Lib
- Connect to EXFOR Lib Alt+X
- Open Exp File(NDPlot Format)
- Open Eva file(NDPlot Format)
- Open ENDF/B-6 File
- Manipulating Data Alt+D
- Chain Yield(Evaluated)
- Yield Energy Dependence(Evaluated)

In the background, a plot is visible with the y-axis labeled "Cross Sectio" and numerical markers at 0.4 and 0.6.

Introduction of NDPlot

Data->Import Text Data: free format data

Data->Connect to Evaluated Lib: Retrieve data from Eva. Lib (**Alt+E**)

Data->Evaluated Lib Tree: Show the Eva. Lib information in tree form.

Data->Ratio of Eva. Data: Ratio of Cross Section(same lib)

Data->Ratio of Eva. Data with diff. lib:

Ratio of Cross Section(same lib)

Data->Connect to EXFOR Lib (**Alt+X**)

Data-> Open Exp. Data (NDPlot format)

Data-> Open Eva. Data (NDPlot format)

Data->Manipulating Data (**Alt+D**) : Chang the size, color, annotation ...of point or curve ; View data ,original data..;

Column Operation for data;

Data->Chain Yield: Chain Yield of Fission Product

Data->Yield Energy Independence: Yield Energy Independence of Fission Product

[Data Menu->Import Text Data]

Import Text Data

Control Label: put the label on the first of the line.

Data Label: Title

Text Label: all lines after this label will be discard until data label is

Contents: revised directly

SUBENT      33030001  20120502  20120702  20120618  3155
BIB         13          41
TITLE      Charge distribution in the mass region 128-134 in low
           energy fission of actinides
AUTHOR     (H.Naik, S.P.Dange, T.Datta)
INSTITUTE  (3INDTRM)
REFERENCE  (J,RCA,62,1,1993)
FACILITY   (REAC,3INDTRM) Swimming pool type research reactor,
           APSARA
SAMPLE     Electrodeposited target of 233U (100 ug), 235U
           (100 ug), 239Pu (100 ug), 241Pu (25 ug) and 245Cm
           (4 ug) have been prepared on 1 mm platinum planchet.
DETECTOR   (HPGE) 80 c.c. HPGe detector connected to a PC based
           4K channel analyzer.
           Resolution of the detector system was 1.8 keV at 1332
           keV of 60Co.
METHOD     (REC,RCHEM,GSPEC) Collection of fission products using
           recoil catcher technique, Radiochemical separation of
           iodine, gamma ray spectrometric analysis of
           unseparated fission products and separated iodine
           sample.
ANALYSIS   From the photo-peak areas of the gamma rays of 128Sn,
           132Te and 134Te their cumulative yields were
           determined using decay equation.
           The independent yield of 132I was determined from its
           photo-peak area in the separated using decay-growth
           equation.
COMMENT    Decay data were taken from the Tbl.1 of RCA, 62, 1, 1993

METHOD     (REC,RCHEM,GSPEC) Collection of fission products using
           recoil catcher technique, Radiochemical separation of
           iodine, gamma ray spectrometric analysis of
           unseparated fission products and separated iodine
           sample.
ANALYSIS   From the photo-peak areas of the gamma rays of 128Sn,
           132Te and 134Te their cumulative yields were
           determined using decay equation.
           The independent yield of 132I was determined from its
           photo-peak area in the separated using decay-growth
           equation.
COMMENT    Decay data were taken from the Tbl.1 of RCA,62,1,1993
DECAY-DATA (50-SN-128,59.1MIN,DG,482.3,0.59)
           (51-SB-131,23.03MIN,DG,943.34,0.44)
           (52-TE-132,78.2HR,DG,228.2,0.88)
           (52-TE-134,41.8MIN,DG,210.4,0.223)
           (53-I-132-M,83.6MIN,DG,600.0,0.132,
           DG,667.73,0.132,
           DG,772.68,0.131)
           (53-I-132-G,2.7HR,DG,667.73,0.987,
           DG,772.68,0.762)
ERR-ANALYS (DATA-ERR) The error in the CY of 128Sn, 132Te, 134Te
           and IY of 132I is precissional error due to replicate
           measurement.

The operators and functions in Column Operation

Operation	Key
Operators	+, -, *, /, **
Functions	
abs([x])	absolute value of x
sqrt([x])	square root of x
log([x])	$\log_e x$, natural logarithm (base e) of x
exp([x])	e^x , exponential function of x
sin([x])	sine of x , x in radian
cos([x])	cosine of x , x in radian
tan([x])	tangent of x , x in radian
deg2rad([x])	convert angle from degree to radian
rad2deg([x])	convert angle from radian to degree
asin([x])	inverse sine, $\sin^{-1}(x)$
acos([x])	inverse cosine, $\cos^{-1}(x)$
atan([x])	inverse tangent, $\tan^{-1}(x)$
sinh([x])	hyperbolic sine, $\sinh x$
cosh([x])	hyperbolic cosine, $\cosh x$
tanh([x])	hyperbolic tangent, $\tanh x$

Introduction of NDPlot

■ [Annotations Menu]

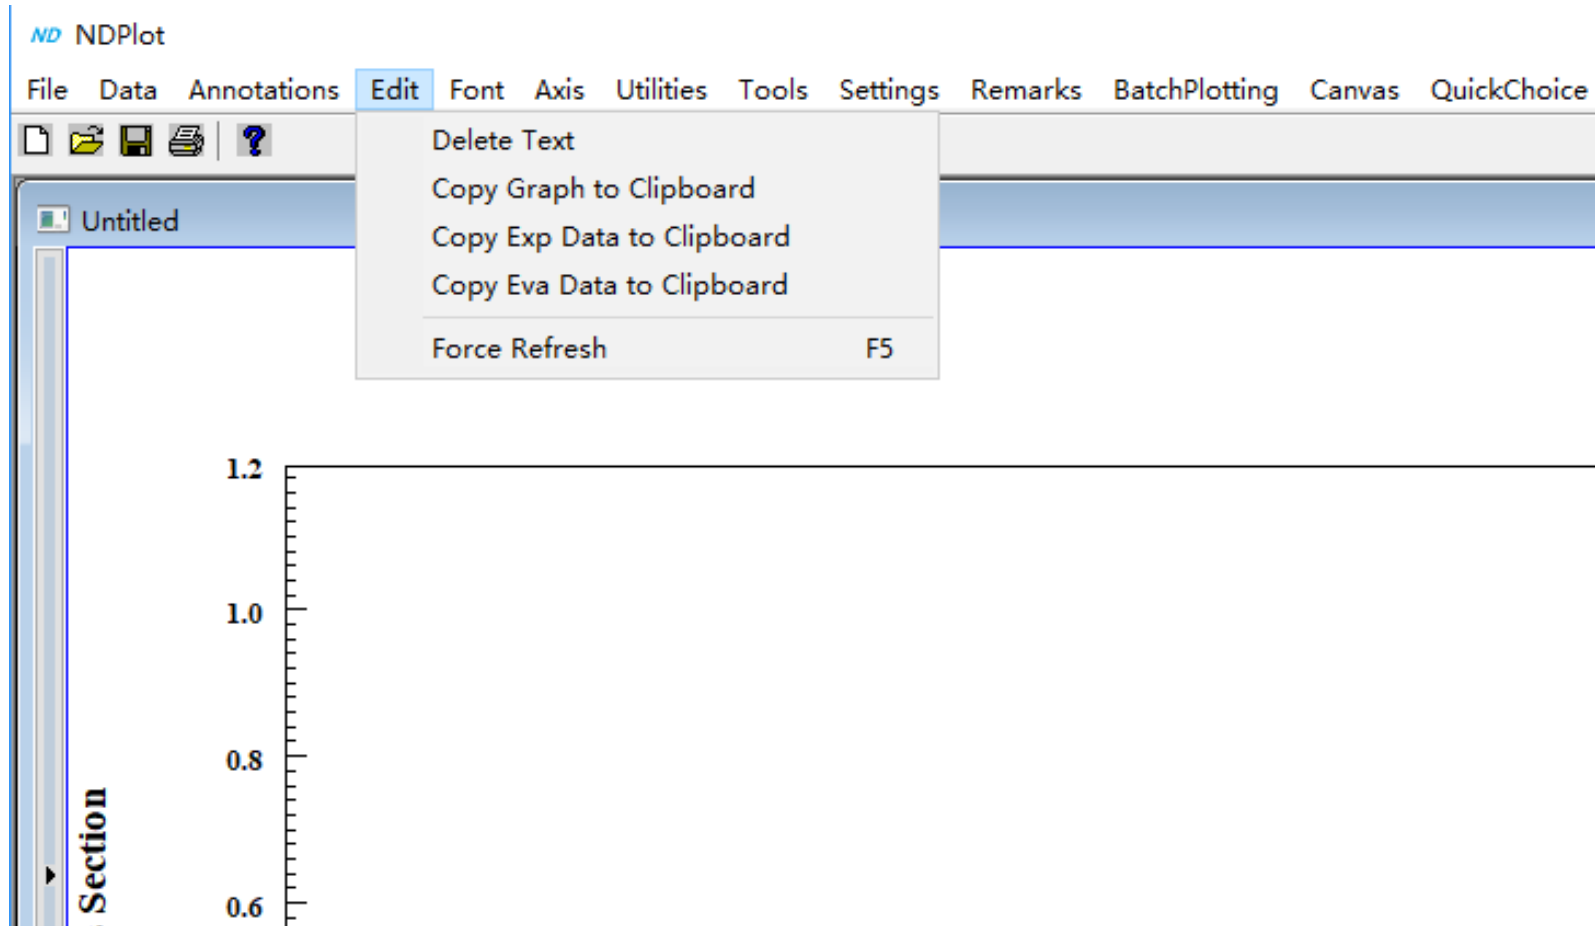

The screenshot displays the NDPlot software interface. The 'Annotations' menu is open, showing options: 'Set Annotation Style', 'Hide All Exp Annotations', and 'Show All Exp Annotations'. The 'Annotations Settings' dialog box is also open, showing the following configuration:

- Annotations Settings**
- Overall Arranged**
- Devided into: Columns
- Length: (150-1000)
- Individually Arranged**
-

The background shows a plot window with a y-axis ranging from 0.8 to 1.2 and a plot area titled 'Untitled'.

Introduction of NDPlot

■ [Axis]

The image displays three screenshots of the NDPlot software interface, illustrating the configuration options for the 'ND Axis Layer'. Each screenshot shows a different tab in the 'Axis Layer' dialog box.

- Left Screenshot:** Shows the 'Tick Labels' tab. It includes options for 'Show Major Label', 'FONT' (set to 'Times New Roman'), 'Apply to', 'Display' (set to 'Decimal:1000'), 'Auto', and 'Plus Signs'. There are also selection icons for 'Left', 'Bottom', 'Right', and 'Top' axes.
- Middle Screenshot:** Shows the 'Grid Lines' tab. It includes options for 'Major Grid' (checked), 'Colour' (set to 'Dark Cyan'), and 'Line Type' (set to 'Short Dot'). There are also selection icons for 'Horizontal' and 'Vertical' grid lines.
- Right Screenshot:** Shows the 'Title.Format' tab. It includes options for 'Show Ticks' (checked), 'Show Axis', 'Title' (set to 'Cross Section(B)'), 'FONT', 'Tick Colour' (set to 'Black'), 'Thickness' (set to '1'), 'Tick' (set to '0'), and 'Axis' (set to 'Percent/Value'). There are also selection icons for 'Left', 'Bottom', 'Right', and 'Top' axes.

- Summary

Visualization of Fission Product Yield

There are two kinds of visualization that need to be solved urgently

Chain Yield

Yield Energy
Independence

process the data manually

Very inefficient

Visualization of Fission Product Yield

Evaluated Data:
MF=8,MT=454,459

Exp. Data
FY(CUM,IND,CHN)

Visualization of Fission Product Yield

Experimental Data of Fission Product need more complex structures

 AUTHOR (W.LANG,H-G.CLERC,H.WOHLFARTH,H.SCHRADER,K-H.SCHMI
 TITLE -NUCLEAR CHARGE AND MASS YIELDS FOR U-235(N(TH),F)
 A FUNCTION OF THE KINETIC ENERGY OF THE FISSION
 PRODUCTS-.
 FACILITY (SPECM,2FR ILL) LOHENGRIN ON-LINE MASS SEPERATOR.
 (REAC,2FR ILL) HIGH FLUX REACTOR.
 INC-SOURCE (REAC) THERMAL NEUTRONS FROM REACTOR.
 INC-SPECT MAXWELLIAN THERMAL NEUTRON SPECTRUM.
 SAMPLE . THIN SAMPLES OF 40 MICRO-GM/CM**2 URANIUM DIOXIDE
 ENRICHED TO 93 PERCENT U-235, EVAPORATED BY ELECT
 BOMBARDMENT ONTO A COPPER BACKING.
 METHOD (ASEP) ON-LINE MASS SEPERATION OF FISSION PRODUCT
 DETECTED WITH A SILICON SURFACE BARRIER DETECTOR
 THE EXIT SLIT OF THE SPECTROMETER, MASS RESOLVING
 POWER OF 1/400.
 .NUCLEAR CHARGE DISTRIBUTIONS FOR EACH MASS CHAIN
 ARE MEASURED WITH A TIME OF FLIGHT TECHNIQUE AFTE
 FISSION PRODUCT ENERGY LOSS IN A THIN HOMOGENEOUS
 CARBON ABSORBER FOIL. THE TIME OF FLIGHT SPECTRA
 ARE UNFOLDED TO GIVE FRACTIONAL INDEPENDANT YIELD
 AS A FUNCTION OF THE FRAGMENT KINETIC ENERGIES.

Summary

- NDPlot is an efficient plotting software for nuclear data and easy to use.
- It can be All-in-one (information)
- The Work base on EXFOR database and some tools provided from NDS. Thanks to NDS and IAEA, especially Thanks to Viktor ZERKIN.

Prospect

- New function such as correction exp. Data with standard cross sections
- Low network speed should be considered.
- More friendly human-machine interface

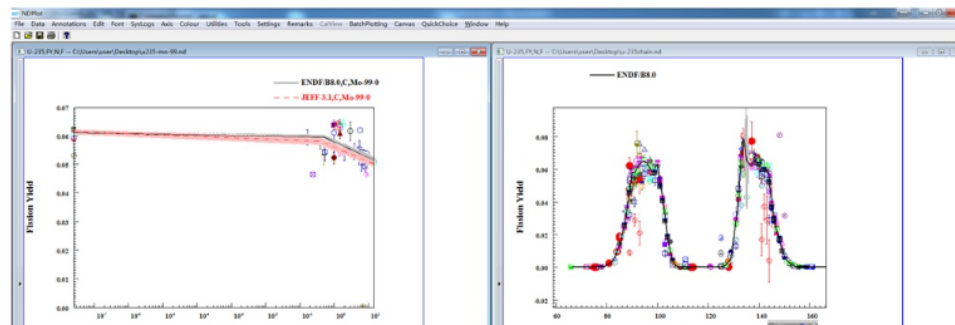

Website: <http://www.nuclear.csdb.cn/ndplot/>

NDPlot is an efficient plotting software for nuclear data, it is not only a plotting tool for nuclear data, but also integrated application software.

Now we have released the beta version of NDPlot, and established a NDPlot server on internet. NDPlot can plot experimental and evaluated data of reaction cross sections, angular distributions of secondary particles, energy distribution of secondary particles and product energy-angle distributions.

Since September 2018, it has been able to draw the chain yield and yield energy dependence of fission products, including experimental data and evaluated data. NDPlot also provides tools to filter fission yield data and correct the data with new gamma data.

Thank you for your attention !
