## Summary of Contents and Documentation

### Abstract

This document summarizes contents and documentation of the 1974 version of the General Purpose File of the ENDF/B Library maintained by the National Nuclear Data Centre (NNDC) at the Brookhaven National Laboratory. USA. The Library contains numerical neutron reaction data for 90 isotopes or elements. The entire Library or selective retrievals from it can be obtained on magnetic tape from the IAEA Nuclear Data Section.

0. Schwerer

March 1980 Revised April 1980 Revised May 1983 Revised December 1989

The file was revised to conform with ENDF/B format standards. The merged file was corrected for format errors to ensure, as far as possible, format compatibility.

# Note:

The IAEA-NDS-reports should not be considered as formal publications. When a nuclear data library is sent out by the IAEA Nuclear Data Section, it will be accompanied by an IAEA-NDS-report which should give the data user all necessary documentation on contents, format and origin of the data library.

IAEA-NDS-reports are updated whenever there is additional information of relevance to the users of the data library .

For citations care should be taken that credit is given to the author of the data library and/or to the data center which issued the data library .The editor of the IAEA-NDS-report is usually not the author of the data library .

Neither the originator of the data libraries nor the IAEA assume any liability for their correctness or for any damages resulting from their use.

#### ENDF/B-4

#### General Purpose File

This is the 1974 version of the ENDF/B Library. For 90 materials all relevant cross sections and differential data (angular and energy distributions) of all relevant neutron-induced reactions are given in the energy range 10-5 eY to 20 KeY.

The entire library has 216885 records. it can be sent out on a single magnetic tape.

Using a density of 1600 bpi

Note that for the following ENDF/B files the more recent ENDF/B-5 version (1979) is available from IAEA-NDS:

ENDF/B-5 Standards File (<sup>1</sup>H, <sup>3</sup>He, <sup>6</sup>Li, <sup>10</sup>B, <sup>12</sup>c, <sup>197</sup>Au, <sup>235</sup>U), see IAEA-NDS-15

ENDF/B-5 Dosimetry File (dosimetry reactions), see IAEA-NDS-24

ENDF/B-5 Fission Product File. see IAEA-NDS-25

ENDF/B-5 Actinides File, see IAEA-NDS-13

In Table 3 (page 5) the materials included in the ENDF/B-4 General Purpose File, their accession numbers (=MAT) and authors are listed.

<u>Note:</u> The ENDF/B-4 version distributed by the IAEA Nuclear Data Section before 1982 contained some mistakes that were corrected in the beginning of 1983.

The ENDF/B-4 Library is now available in two versions. The normal version contains data in the form of resonance parameters. In the version "ENDF/B-4-R" the resonance parameters have been converted by the code 'RECENT' to cross-sections as functions of energy assuming a temperature of O°K.

This version has a size of 1.053.950 records requiring four magnetic tapes using a density of 1600 bpi and a blocking factor of 60.

Table 1 lists the tape lengths for the 4 parts of the "reconstructed file" for various combinations of density and blocking factor. Because of the large extent of the reconstructed version of the library requestors are encouraged to request specifically the material(s) needed and not necessarily the whole file.

\* STANDARD LARGE TAPE HAS 2400 FEET.

It should also be noted that in the reconstructed file, the usual limit of 5000 points per reaction type introduced in many processing programs, is far exceeded in many cases. Table 2 lists the number of points for the most important reaction types.

Zirc-2 = Zircalloy

 $^{\circ}$  = These evaluations were included in ENDF/B-V (1979) unchanged or with minor modifications only; they are listed in the Summary Documentation of ENDF/B-V with evaluation dates of 1974 or earlier.

#### Documentation:

D. Garber, ENDF/B Summary Documentation, Report BNL-17541 (= ENDF-201, 2nd edition), October 1975.

Summaries are contained also in the file itself at the beginning of each material.

For a number of materials there are more detailed documentaions available in separate reports (for these references see BNL-17541 and CINDA).

Data tabulations, graphical plots and characteristic cross-section values (thermal, l/E, Watt-spectrum) see also H.Ch. Rieffe, H.J. Nolthenius, report RCN-75-157, Petten, Dec. 1975.

#### ENDF/B-IV format:

A complete description of the ENDF/B-IV format, including all physical definitions required for the processing of more complicated data types (e.g. differential data) is given in the report BNL-NCS- 50496 (ENDF-102), October 1975.

For quick reference of the ENDF/B format (File Numbers and Reaction Type Numbers of the most important data types) see the document IAEA-NDS-I0.

Note: Listings of all ENDF/B format data can also be requested in "edited format". Such listings provide all necessary quantity headings, units, etc. and are self-explanatory.
