========================================================================== Fixup
                                                                           Fixup
     PROGRAM FIXUP                                                         Fixup
     =============                                                         Fixup
     VERSION 84-1 (NOVEMBER 1984)                                          Fixup
     VERSION 86-1 (JANUARY 1986) *IMPROVED BASED ON USER COMMENTS          Fixup
                                 *FORTRAN-77/H VERSION                     Fixup
     VERSION 86-2 (JUNE 1986)    *ALLOW CREATION OF SECTIONS OF CROSS      Fixup
                                  SECTIONS WHICH ARE NOT PRESENT IN        Fixup
                                  THE ORIGINAL EVALUATION                  Fixup
     VERSION 88-1 (JULY 1988)    *OPTION...INTERNALLY DEFINE ALL I/O       Fixup
                                  FILE NAMES (SEE, SUBROUTINE FILEIO       Fixup
                                  FOR DETAILS).                            Fixup
                                 *IMPROVED BASED ON USER COMMENTS.         Fixup
     VERSION 89-1 (JANUARY 1989) *PSYCHOANALYZED BY PROGRAM FREUD TO       Fixup
                                  INSURE PROGRAM WILL NOT DO ANYTHING      Fixup
                                  CRAZY.                                   Fixup
                                 *UPDATED TO USE NEW PROGRAM CONVERT       Fixup
                                  KEYWORDS.                                Fixup
                                 *ADDED LIVERMORE CIVIC COMPILER           Fixup
                                  CONVENTIONS.                             Fixup
     VERSION 89-2 (MARCH 1989)   *ADDED ENDF-6 SUMMATION RULES AND         Fixup
                                  DEFINED MF AND MT NUMBERS. PROGRAM       Fixup
                                  WILL NOW USE MF=1, MT=451 TO DEFINE      Fixup
                                  THE ENDF FORMAT OF THE DATA (E.G.,       Fixup
                                  ENDF-6 OR EARLIER) AND USE THE           Fixup
                                  CORRECT SUMMATION RULES FOR EACH         Fixup
                                  VERSION OF THE ENDF FORMAT. IF           Fixup
                                  MF=1, MT=451 IS NOT PRESENT PROGRAM      Fixup
                                  WILL USE ENDF-6 SUMMATION                Fixup
                                  CONVENTIONS AS A DEFAULT.                Fixup
     VERSION 90-1 (JUNE 1990)    *UPDATED BASED ON USER COMMENTS           Fixup
                                 *ADDED PHOTON INTERACTION, MF=23          Fixup
     VERSION 91-1 (JUNE 1991)    *ADDED FORTRAN SAVE OPTION                Fixup
                                 *NEW MORE CONSISTENT ENERGY OUTPUT        Fixup
                                  ROUTINE                                  Fixup
     VERSION 92-1 (JANUARY 1992) *ADDED OPTION TO CALCULATE RATIOS,        Fixup
                                  E.G., CAPTURE/FISSION AND PRODUCTS,      Fixup
                                  NU-BAR*FISSION - AND OUTPUT THE          Fixup
                                  RESULTS IN THE ENDF FORMAT (SEE,         Fixup
                                  BELOW - CREATING RATIOS AND PRODUCTS)    Fixup
                                 *ALLOW TOTAL NU-BAR (MF=1, MT=452) TO     Fixup
                                  BE USED IN DEFINING RATIOS OR            Fixup
                                  PRODUCTS.                                Fixup
                                 *ALLOW ALL CROSS SECTIONS TO BE PUT       Fixup
                                  ON A UNIFORM ENERGY GRID.                Fixup
                                 *NOTE, CHANGE IN INPUT FORMAT FOR         Fixup
                                  RANGES OF MT NUMBERS                     Fixup
                                 *COMPLETELY CONSISTENT I/O ROUTINES -     Fixup
                                  TO MINIMIZE COMPUTER DEPENDENCE.         Fixup
     VERSION 93-1 (JULY 1993)    *CORRECTED ALGORITHM TO CREATE UNIFORM    Fixup
                                  ENERGY GRID.                             Fixup
     VERSION 94-1 (JANUARY 1993) *VARIABLE ENDF/B DATA FILENAMES           Fixup
                                  TO ALLOW ACCESS TO FILE STRUCTURES       Fixup
                                  (WARNING - INPUT PARAMETER FORMAT        Fixup
                                  HAS BEEN CHANGED)                        Fixup
                                 *INCREASED PAGE SIZE FROM 1002 TO         Fixup
                                  12000 DATA POINTS.                       Fixup
                                 *CLOSE ALL FILES BEFORE TERMINATING       Fixup
                                  (SEE, SUBROUTINE ENDIT)                  Fixup
     VERSION 96-1 (JANUARY 1996) *COMPLETE RE-WRITE                        Fixup
                                 *IMPROVED COMPUTER INDEPENDENCE           Fixup
                                 *ALL DOUBLE PRECISION                     Fixup
```

```
                          *ON SCREEN OUTPUT                          Fixup
                          *UNIFORM TREATMENT OF ENDF I/O             Fixup
                          *IMPROVED OUTPUT PRECISION                 Fixup
                          *DEFINED SCRATCH FILE NAMES                Fixup
                          *INCREASED PAGE SIZE FROM 12000 TO         Fixup
                           36000 DATA POINTS.                        Fixup
VERSION 99-1 (MARCH 1999) *CORRECTED CHARACTER TO FLOATING           Fixup
                           POINT READ FOR MORE DIGITS                Fixup
                          *UPDATED TEST FOR ENDF FORMAT              Fixup
                           VERSION BASED ON RECENT FORMAT CHANGE     Fixup
                          *GENERAL IMPROVEMENTS BASED ON             Fixup
                           USER FEEDBACK                             Fixup
VERSION 99-2 (JUNE 1999)  *ASSUME ENDF-6, NOT 5, IF MISSING          Fixup
                           MF=1, MT-451.                             Fixup
                          *FIXED CREATION OF SECTIONS                Fixup
VERS. 2000-1 (FEBRUARY 2000)*GENERAL IMPROVEMENTS BASED ON           Fixup
                           USER FEEDBACK                             Fixup
VERS. 2002-1 (MAY 2002)   *OPTIONAL INPUT PARAMETERS                 Fixup
                          *SUMMATION RULES ARE DEFINED BASED         Fixup
                           ON CONTENTS OF TABLES.                    Fixup
VERS. 2004-1 (JAN. 2004)  *GENERAL UPDATE BASED ON USER FEEDBACK     Fixup
                          *INCREASED PAGE SIZE FROM 36000 TO         Fixup
                           60000 DATA POINTS.                        Fixup
VERS. 2005-1 (JAN. 2005)  *UPDATED MT CREATION TO ALLOW MAT =0       Fixup
                           INDICATING CREATE FOR ALL MATS.           Fixup
VERS. 2007-1 (JAN. 2007)  *CHECKED AGAINST ALL ENDF/B-VII DATA       Fixup
                          *INCREASED PAGE SIZE FROM 60,000 TO        Fixup
                           600,000 DATA POINTS.                      Fixup
VERS. 2007-2 (OCT. 2007)  *ADDED MT=16 AS SUM MT=875 THRU 891        Fixup
                          *72 CHARACTER FILE NAMES                   Fixup
VERS. 2010-1 (Apr. 2010)  *Defining cross sections by summation      Fixup
                           to now mandatory - either build-in        Fixup
                           rules or by user input.                   Fixup
VERS. 2011-1 (March 2011) *Added new MT # to allowed and             Fixup
                           summation rules.                          Fixup
VERS. 2012-1 (Aug.  2012) *Corrected definition of MT=3 to avoid     Fixup
                           double counting of MT=18.                 Fixup
                          *Extended incident particle list to        Fixup
                           include photon (ZA = 0).                  Fixup
                          *Added CODENAME                            Fixup
                          *32 and 64 bit Compatible                  Fixup
                          *Added ERROR stops.                        Fixup
VERS. 2015-1 (Jan.  2015) *Extended OUT9.                            Fixup
                          *Replaced ALL 3 way IF Statements          Fixup
                                                                     Fixup
VERS. 2015-2 (Oct.  2015) *Threshold Correction no longer            Fixup
                           allowed = TOO DANGEROUS!!!                Fixup
VERS. 2017-1 (May   2017) *Updated based on user feekback            Fixup
                          *Increased tables to 3,000,000.            Fixup
                          *All floating input parameters changed     Fixup
                           to character input + IN9 conversion.      Fixup
                                                                     Fixup
OWNED, MAINTAINED AND DISTRIBUTED BY                                 Fixup

PURPOSE
=======
THIS PROGRAM IS DESIGNED TO READ EVALUATED DATA IN THE ENDF FORMAT, PERFORM CORRECTIONS AND OUTPUT THE RESULT IN THE ENDF FORMAT. TWO TYPES OF CORRECTIONS ARE POSSIBLE (1) AUTOMATIC AND (2) OPTIONAL (BASED ON USER INPUT) CORRECTIONS.

ONE OF THE MOST IMPORTANT FUNCTIONS OF THIS PROGRAM IS TO RE-DEFINE ALL REDUNDANT CROSS SECTIONS (E.G. TOTAL) TO BE EXACTLY EQUAL TO THE SUM OF ITS PARTS. THIS PROCEDURE ELIMINATES THE PROBLEM WITH MANY ENDF EVALUATIONS, WHERE DUE TO THE USE OF NON-LINEAR INTERPOLATION LAWS THE TOTAL MAY BE EQUAL TO THE SUM OF ITS PARTS AT ALL TABULATED ENERGIES, BUT BASED ON THE INTERPOLATION LAWS IT CAN BE QUITE DIFFERENT AT ENERGIES BETWEEN TABULATED ENERGIES.

AUTOMATIC CHECKS/CORRECTIONS
============================
(1) CHECK THAT MAT/MF/MT DOES NOT CHANGE UNLESS A MEND/FEND/SEND LINE IS READ. IF MAT/MF/MT CHANGES A WARNING MESSAGE IS PRINTED BUT NO CORRECTIVE ACTION IS TAKEN.
(2) ALL LINES WITHIN A GIVEN MAT WILL BE SEQUENTIALLY NUMBERED ON OUTPUT.

OPTIONAL CHECKS/CORRECTIONS
===========================
THE FOLLOWING NUMBERS CORRESPOND TO THE INPUT DATA OPTION COLUMNS (SEE THE DESCRIPTION OF THE INPUT BELOW)

(1) CORRECT ZA AND AWR IN ALL SECTIONS. CHECK TO INSURE THAT THE C1 AND C2 VALUES (ZA AND AWR) ARE THE SAME IN ALL SECTIONS. THE C1 AND C2 OF THE FIRST SECTION READ ARE ASSUMED TO BE CORRECT AND ARE USED FOR COMPARISON. IF THE C1 AND/OR C2 OF THE FIRST SECTION ARE NOT POSITIVE AN ERROR MESSAGE IS OUTPUT AND THE MATERIAL IS COPIED WITHOUT CHANGE.
    NOTE....TO CHANGE THE ZA AND/OR AWR OF ANY MATERIAL IT IS MERELY NECESSARY TO CHANGE THE ZA AND/OR AWR IN THE FIRST SECTION OF THE MATERIAL AND USE THIS OPTION TO AUTOMATICALLY CHANGE ALL OTHER SECTIONS.
(2) CORRECT CROSS SECTION (MF=3) THRESHOLDS. THE Q-VALUE AND AWR ARE USED TO DERIVE THE REACTION THRESHOLD USING THE RELATION,

    E-THRESHOLD = -(Q-VALUE)*(AWRE+1.0)/AWRE

    IF THE THRESHOLD IS POSITIVE THE CROSS SECTION IS CHECKED TO INSURE THAT THE FIRST TABULATED POINT IS AT THE THRESHOLD AND HAS A ZERO CROSS SECTION. IF NOT, THE CROSS SECTION WILL BE CHANGED.
    (A) IF THE FIRST TABULATED POINT IS ABOVE THE THRESHOLD AND HAS A ZERO CROSS SECTION, THE POINT IS DELETED AND A POINT IS INSERTED AT THE THRESHOLD.
    (B) IF THE FIRST TABULATED POINT IS ABOVE THE THRESHOLD AND

```
        HAS A NON-ZERO CROSS SECTION, A POINT WITH ZERO CROSS      Fixup
        SECTION IS INSERTED AT THE THRESHOLD.                      Fixup
     (C) IF THE FIRST TABULATED POINT IS BELOW THE THRESHOLD AND    Fixup
        HAS A NON-ZERO CROSS SECTION, ALL POINTS BELOW THE         Fixup
        THRESHOLD ARE DELETED AND A POINT WITH ZERO CROSS SECTION  Fixup
        IS INSERTED AT THE THRESHOLD.                              Fixup
 (3) EXTEND ALL CROSS SECTIONS (MF=3) TO 20 MEV. IF THE TABULATED   Fixup
     CROSS SECTION ENDS BELOW 20 MEV IT WILL BE EXTENDED TO 20 MEV  Fixup
     AS EITHER ZERO (IMOPS(3)=1) OR CONSTANT (IMOPS(3)=2) EQUAL     Fixup
     TO THE LAST TABULATED VALUE.                                   Fixup
 (4) ALLOW REACTION (MF=3, ANY MT) DELETION. ALL SPECIFIED          Fixup
     REACTIONS WILL BE DELETED WHEN THE DATA IS READ FROM THE       Fixup
     INPUT ENDF DATA FILE AND WILL NOT BE IN THE OUTPUT ENDF        Fixup
     DATA FILE. WARNING DELETED REACTIONS MAY NOT BE USED TO DEFINE Fixup
     ANY RECONSTRUCTED REACTIONS (I.E. REACTIONS DEFINED BY SUMMING Fixup
     OTHER REACTIONS). SINCE DELETED REACTIONS ARE DELETED DURING   Fixup
     READING IT IS AS IF THEY NEVER EXISTED AND IF ANY DELETED      Fixup
     REACTION IS REQUIRED LATER TO DEFINE ANY SUM AN ERROR WILL     Fixup
     RESULT. THE USER MAY SPECIFY THAT THE DELETION RULES ARE TO BE Fixup
     READ FROM INPUT (IMOPS(4)=1) OR THAT THE BUILT IN SUMMATION    Fixup
     RULES ARE TO BE USED (MOPS(4)=2). AT THE PRESENT TIME THE      Fixup
     BUILT-IN DELETION RULES ARE THAT NO SECTIONS SHOULD BE DELETED Fixup
     (THE USER MAY OVERRIDE THIS CONVENTION BY INPUT).              Fixup
 (5) ALLOW REACTION (MF=3, ANY MT) RECONSTRUCTION BY SUMMING OTHER  Fixup
     REACTIONS. IN ORDER TO OPTIMIZE THE RUNNING TIME OF THIS       Fixup
     PROGRAM CARE SHOULD BE EXERCISED TO MINIMIZE THE NUMBER OF     Fixup
     TIMES THAT EACH CONTRIBUTING CROSS SECTION MUST BE USED.       Fixup
     THE USED MAY SPECIFY THAT THE SUMMATION RULES ARE TO BE READ   Fixup
     AS INPUT (IMOPS(5)=1) OR THAT THE BUILT IN SUMMATION RULES     Fixup
     ARE TO BE USED (IMOPS(5)=2). THE BUILT IN SUMMATION RULES ARE  Fixup
     DESIGNED TO USE ENDF CONVENTIONS AND TO MINIMIZE THE NUMBER    Fixup
     OF TIMES THAT EACH CROSS SECTION IS USED.                      Fixup
 (6) INSURE THAT ALL CROSS SECTIONS ARE NON-NEGATIVE (I.E. ARE      Fixup
     ZERO OR POSITIVE). DURING READING ALL NEGATIVE CROSS SECTIONS  Fixup
     WILL BE SET EQUAL TO ZERO AND TREATED AS SUCH DURING ALL       Fixup
     SUBSEQUENT SUMMATIONS AND ENDF OUTPUT.                         Fixup
     NOTE...THIS OPTION SHOULD NEVER BE USED WITH DATA CONTAINING   Fixup
     BACKGROUND CROSS SECTIONS WHICH MAY BE NEGATIVE. ONLY AFTER    Fixup
     THE RESONANCE CONTRIBUTION HAS BEEN ADDED TO THE BACKGROUND    Fixup
     TO DEFINE THE ACTUAL CROSS SECTION IS IT VALID TO ELIMINATE    Fixup
     NEGATIVE CROSS SECTIONS.                                       Fixup
     NOTE...THIS OPTION MAY BE USED TO DELETE NEGATIVE ELASTIC      Fixup
     CROSS SECTIONS THAT MAY RESULT FROM RECONSTRUCTING CROSS       Fixup
     SECTIONS FROM SINGLE LEVEL BREIT-WIGNER PARAMETERS. IF THE     Fixup
     TOTAL CROSS SECTION IS THEN RECONSTRUCTED USING THE CORRECTED  Fixup
     ELASTIC CROSS SECTION THE TOTAL WILL BE POSITIVE DUE TO THE    Fixup
     CONTRIBUTIONS OF CAPTURE AND FISSION (THUS AVOIDING NUMERICAL  Fixup
     INSTABILITY PROBLEMS DURING SELF-SHIELDING CALCULATIONS).      Fixup
 (7) WITHIN EACH SECTION OF CROSS SECTIONS DELETE ENERGIES THAT      Fixup
     ARE NOT IN ASCENDING ENERGY ORDER (ENERGY REPETITION IS O.K.)  Fixup
 (8) WITHIN EACH SECTION OF CROSS SECTIONS ELIMINATE DUPLICATE       Fixup
     POINTS (SUCCESSIVE POINTS WITH THE SAME ENERGY-CROSS SECTION). Fixup
 (9) TEST THAT ALL SECTIONS ARE IN ASCENDING MAT/MF/MT ORDER.       Fixup
     IF NOT, NO CORRECTIVE ACTION WILL BE TAKEN, ONLY AN ERROR      Fixup
     MESSAGE WILL BE OUTPUT.                                        Fixup
(10) CHECK MF/MT FOR EACH SECTION TO INSURE THAT THEY ARE DEFINED   Fixup
     IN THE ENDF FORMAR MANUAL. IF THEY ARE NOT DEFINED AN ERROR    Fixup
     MESSAGE IS PRINTED, BUT NO CORRECTIVE ACTION IS TAKEN.         Fixup
(11) ALLOW SECTIONS WHICH ARE NOT PRESENT IN THE ORIGINAL (INPUT)   Fixup
     EVALUATION TO BE CREATED. NORMALLY THIS PROGRAM WILL ONLY      Fixup
     RECONSTRUCT AND OUTPUT SECTIONS IF THE SECTION IS PRESENT      Fixup
     IN THE ORIGINAL EVALUATION. THIS PROCEDURE IS FOLLOWED BECAUSE Fixup
     NORMALLY THE PROGRAM DOES NOT KNOW HOW TO DEFINE THE CONTENTS  Fixup
```

```
    OF THE FIRST TWO LINES OF THE SECTION (E.G., Q-VALUE,          Fixup
    TEMPERATURE, INITIAL AND FINAL STATES). THIS OPTION MAY BE     Fixup
    USED TO ALLOW THE PROGRAM TO READ AND SAVE A TABLE DEFINING    Fixup
    THE CONTENTS OF THE FIRST TWO LINES OF EACH SECTION TO BE      Fixup
    CREATED.                                                       Fixup
    NOTE...IF A SECTION IS PRESENT ANY COMMAND TO CREATE IT WILL   Fixup
    BE IGNORED.                                                    Fixup
(12)ALLOW ENERGY POINTS TO BE INSERTED. THE PROGRAM CAN READ UP    Fixup
    TO 50, ENERGIES, MAT, MT AND USE LINEAR INTERPOLATION TO       Fixup
    INSERT ENERGY POINTS INTO TABLES AS THEY ARE READ, E.G.,       Fixup
    INSERT AN ENERGY POINT AT THERMAL ENERGY (0.0253 EV). IF       Fixup
    AN MAT AND/OR MT IS ZERO THIS IMPLIES = ALL - INSERT THE       Fixup
    ENERGY IN ALL TABLES.                                          Fixup
(13)PUT ALLOW CROSS SECTIONS ON A UNIFORM ENERGY GRID = EACH       Fixup
    SECTION (MT) OF CROSS SECTIONS WILL INCLUDE ALL ENERGIES       Fixup
    WHICH APPEAR IN AT LEAST ONE SECTION OF DATA. PARAMETERS       Fixup
    (MT=251 THROUGH 255) ARE NOT INCLUDED IN THE UNIFORM ENERGY    Fixup
    GRID.                                                          Fixup
(14)DELETE SECTION IF CROSS SECTION = 0 AT ALL ENERGIES. THIS      Fixup
    SOUNDS LIKE AN ABSURD OPTION, BUT IS REQUIRED BECAUSE SUCH     Fixup
    SECTIONS EXIST IN ENDF/B-VI DATA.                              Fixup
                                                                   Fixup
CREATING RATIOS AND PRODUCTS                                       Fixup
============================                                       Fixup
IN ORDER TO CREATE RATIOS AND PRODUCTS = NEW MT NUMBERS, YOU MUST  Fixup
DO TWO THINGS,                                                     Fixup
                                                                   Fixup
1) DEFINE EACH NEW MT NUMBER AS A RATIO OR PRODUCT OF TWO MT       Fixup
   NUMBERS.                                                        Fixup
                                                                   Fixup
2) USE THE CREATE MT NUMBER OPTION AND INPUT THE FIRST TWO LINES   Fixup
   OF THE SECTION                                                  Fixup
                                                                   Fixup
WARNING - UNLESS YOU DO BOTH OF THESE YOU WILL NOT OBTAIN OUTPUT   Fixup
IN THE ENDF FORMAT.                                                Fixup
                                                                   Fixup
TWO SPECIAL MT NUMBERS HAVE BEEN DEFINED BY CSEWG INVOLVING        Fixup
RATIOS AND PRODUCTS,                                               Fixup
                                                                   Fixup
ALPHA (MT=254)= CAPTURE (MT=102)/FISSION (MT=18)                   Fixup
                                                                   Fixup
ETA (MT=255)  = NU-BAR (MT=452)*FISSION (MT=18)/ABSORPTION (MT=27) Fixup
                                                                   Fixup
ABSORPTION (MT=27) = FISSION (MT=18) + SUM (MT=102 THROUGH 116)    Fixup
                                                                   Fixup
AS YET THERE IS NO STANDARD DEFINITION OF MT NUMBERS FOR RATIO     Fixup
OR PRODUCT DATA. YOU ARE FREE TO USE ANY MT NUMBERS NORMALLY NOT   Fixup
USED IN THE ENDF. HOWEVER, IT WILL THEN BE YOUR RESPONSIBILITY     Fixup
TO PROPERLY INTERPRET THE RESULTS, I.E., NOBODY ELSE WILL HAVE     Fixup
ANY IDEA HOW TO INTERPRET A TABLE OF DATA ASSOCIATED WITH THE MT   Fixup
NUMBERS YOU HAVE USED.                                             Fixup
                                                                   Fixup
THIS PROGRAM CAN BE ONLY DIRECTLY DEFINE RATIOS AND PRODUCTS       Fixup
USING TWO MT NUMBERS = BINARY OPERATIONS, E.G., DEFINE THE CAPTURE Fixup
TO FISSION RATIO, OR DEFINE THE PRODUCT NU-BAR*FISSION.            Fixup
                                                                   Fixup
THIS PROGRAM CANNOT DIRECTLY DEFINE RATIO OR PRODUCT OF A SUM OF   Fixup
SECTIONS TO THE SUM OF ANOTHER SET OF SECTIONS. HOWEVER, THIS CAN  Fixup
BE DONE INDIRECTLY BY FIRST DEFINING A DUMMY MT NUMBER (ANY MT     Fixup
NUMBER NOT NORMALLY USED IN ENDF) TO BE A SUM OF SECTIONS AND      Fixup
A SECOND DUMMY MT NUMBER TO BE A SECOND SUM OF SECTIONS. YOU CAN   Fixup
THEN DEFINE RATIO OR PRODUCT YOU REQUIRE TO BE THE RATIO OF THESE  Fixup
TWO DUMMY MT NUMBERS.                                              Fixup
```

```
                                                                      Fixup
FOR EXAMPLE, TO DEFINE ETA,                                           Fixup
1) FIRST DEFINE (MT=27) = (MT=27) + (SUM OF MT=102 THROUGH 116)       Fixup
2) NEXT DEFINE (MT=333) = (MT=452)*(MT=18)                            Fixup
3) LAST DEFINE (MT=255) = (MT=333)/(MT=27)                            Fixup
DO NOT FORGET TO TURN ON THE CREATE SECTION OPTION (ON THE FIRST       Fixup
INPUT LINE) AND INPUT THE FIRST TWO LINES OF SECTION MT=255 -          Fixup
OTHERWISE YOU WILL NOT GET ANY ENDF FORMATTED OUTPUT.                  Fixup
                                                                      Fixup
THE ONLY SPECIAL CONVENTIONS USED BY THIS PROGRAM IN CALCULATING       Fixup
RATIOS ARE WHEN THE DENOMINATOR OF THE RATIO IS ZERO. IN THIS          Fixup
CASE IF THE NUMERATOR IS ALSO ZERO THE RATIO IS DEFINED TO BE ONE.     Fixup
IN THIS CASE IF THE NUMERATOR IS NOT ZERO THE RATIO IS DEFINED         Fixup
TO BE ZERO.                                                           Fixup
                                                                      Fixup
ENDF FORMAT                                                           Fixup
===========                                                           Fixup
THIS PROGRAM MAY BE USED WITH DATA IN ANY VERSION OF THE ENDF          Fixup
FORMAT (I.E. ENDF-1, 2, 3, 4, 5 OR 6 FORMAT). SINCE A                 Fixup
PAGING SYSTEM IS USED STORE CROSS SECTION TABLES ON SCRATCH FILES      Fixup
THERE IS NO LIMIT TO THE SIZE OF TABLES (E.G. THE TOTAL CROSS          Fixup
SECTION MAY BE REPRESENTED BY 200,000 TABULATED POINTS).               Fixup
                                                                      Fixup
WARNING                                                               Fixup
=======                                                               Fixup
(1) FOR EACH SECTION OF CROSS SECTIONS (I.E. EACH MT, MF=3) IN         Fixup
    THE ORIGINAL EVALUATION (I.E. ENDF/B DATA READ) ONE SECTION        Fixup
    OF DATA WILL BE OUTPUT, UNLESS THE SECTION HAS BEEN DELETED.       Fixup
    THIS INCLUDES ANY SECTIONS WHICH ARE NOT PRESENT IN THE            Fixup
    ORIGINAL EVALUATION, BUT THE USER INDICATES (BY INPUT) SHOULD      Fixup
    BE CREATED.                                                       Fixup
                                                                      Fixup
    THE PROGRAM WILL NOT OUTPUT ANY SECTION RECONSTRUCTED BY           Fixup
    SUMMATION UNLESS THE CORRESPONDING SECTION (MT NUMBER) IS          Fixup
    PRESENT IN THE ORIGINAL EVALUATION OR USER INPUT INDICATES         Fixup
    SHOULD BE CREATED AND OUTPUT. THIS IS (A) BECAUSE THE              Fixup
    PROGRAM CANNOT DEFINE THE PARAMETERS TO APPEAR ON THE FIRST        Fixup
    TWO LINES OF THE SECTION, (B) TO AVOID OUTPUTTING TOO MUCH         Fixup
    DATA WHICH THE USER MAY NOT BE INTERESTED IN.                      Fixup
                                                                      Fixup
(2) FOR ANY SECTIONS THAT DO NOT APPEAR IN THE ORIGINAL DATA THE       Fixup
    USER MAY SPECIFY THAT THEY BE DEFINED BY SUMMATION. ANY SUCH       Fixup
    SECTION MAY BE USED BE DEFINE SUBSEQUENT SUMS, BUT THE SECTION     Fixup
    ITSELF WILL NOT BE OUTPUT (E.G. GENERALLY MT=27 AND 101 ARE        Fixup
    NOT PRESENT IN EVALUATIONS. HOWEVER, THE BUILT-IN SUMMATION        Fixup
    RULES OF THIS PROGRAM USES THE ENDF SUMMATION RULES TO             Fixup
    DEFINE MT=27 AND 101, WHICH IN TURN ARE USED TO DEFINE THE         Fixup
    NON-ELASTIC CROSS SECTION, MT=3. SECTIONS MT=27 AND 101 ARE        Fixup
    NOT OUTPUT).                                                       Fixup
                                                                      Fixup
(3) ALL DATA IN FILE 3 AND 23 MUST BE LINEARLY INTERPOLABLE. IF        Fixup
    THE DATA IS NOT LINEARLY INTERPOLABLE THIS PROGRAM WILL            Fixup
    TERMINATE.                                                         Fixup
                                                                      Fixup
PROGRAM OPERATION                                                     Fixup
=================                                                     Fixup
ALL MAT NUMBER ON AN ENDF TAPE ARE PROCESSED. EACH MAT IS              Fixup
TREATED SEPARATELY. WITHIN EACH MAT, EACH SECTION BEFORE MF=3          Fixup
IS READ, CHECKED/CORRECTED (BASED ON INPUT OPTIONS) AND OUTPUT.        Fixup
WHEN MF=3 IS LOCATED ALL CROSS SECTIONS ARE READ, SECTIONS TO BE       Fixup
DELETED ARE DELETED, SECTIONS WHICH ARE NOT PRESENTED AND USER         Fixup
INPUT INDICATES SHOULD BE CREATED ARE CREATE, SECTIONS TO BE KEPT      Fixup
ARE CHECKED/CORRECTED (BASED ON INPUT OPTIONS) AND WRITTEN TO A        Fixup
```

```
SCRATCH FILE. NEXT, IF THE USER SPECIFIES THAT THEY SHOULD,        Fixup
SECTIONS ARE RECONSTRUCTED. FINALLY ALL CROSS SECTIONS (OLD AND    Fixup
NEW) ARE OUTPUT. WITHIN THE SAME MAT, EACH SECTION AFTER MF=3 IS   Fixup
READ, CHECKED/CORRECTED (BASED ON INPUT OPTIONS) AND OUTPUT.       Fixup
                                                                   Fixup
MF=3                                                               Fixup
====                                                               Fixup
THE TREATMENT OF THE CROSS SECTIONS REQUIRES UP TO 4 PASSES FOR    Fixup
CROSS SECTIONS. IN THE PROGRAM THEY CORRESPOND TO SUBROUTINES      Fixup
PASS1, PASS2, PASS3 AND PASS4. THE ORIGINAL AND FINAL ENDF DATA    Fixup
FILES, 5 SCRATCH FILES AND 3 IN CORE ARRAYS ARE USED. OPERATIONS   Fixup
PERFORMED DURING EACH PASS ARE,                                    Fixup
                                                                   Fixup
PASS1                                                              Fixup
=====                                                              Fixup
READ ALL CROSS SECTIONS FROM ITAPE. DELETED ANY SECTIONS. CREATE   Fixup
ANY SECTIONS. CHECK/CORRECT THEM AND WRITE THEM TO SCRATCH FILE.   Fixup
DATA IS READ INTO ARRAY A, TRANSFERRED TO ARRAY C (AFTER EDITING)  Fixup
AND OUTPUT TO ISCRC FROM ARRAY C.                                  Fixup
ITAPE  - UNIT ORIGINAL ENDF DATA IS READ FROM.                     Fixup
ISCRC  - SCRATCH UNIT THAT EDITED DATA IS WRITTEN ON.              Fixup
TABA   - ARRAY INTO WHICH ORIGINAL DATA IS READ.                   Fixup
TABC   - ARRAY INTO WHICH EDITED DATA IS TRANSFERRED TO AND        Fixup
         FROM WHICH IT IS WRITTEN TO ISCRC.                        Fixup
                                                                   Fixup
PASS2                                                              Fixup
=====                                                              Fixup
IF A UNIFORM ENERGY GRID IS REQUESTED IT IS CREATED DURING THIS    Fixup
PASS. FIRST ALL OF THE CROSS SECTIONS FROM PASS1 ARE READ AND A    Fixup
UNIFORM ENERGY GRID IS CREATED = ALL ENERGIES THAT ARE INCLUDED    Fixup
IN AT LEAST ONE SECTION (MT) OF CROSS SECTIONS.                    Fixup
ISCRA  - SCRATCH UNIT CONTAINING UNIFORM ENERGY GRID.              Fixup
ISCRB  - SCRATCH UNIT CONTAINING UNIFORM ENERGY GRID.              Fixup
ISCRC  - SCRATCH UNIT THAT EDITED DATA IS READ FROM.               Fixup
TABA   - ARRAY CONTAINING UNIFORM ENERGY GRID.                     Fixup
TABB   - ARRAY CONTAINING UNIFORM ENERGY GRID.                     Fixup
TABC   - ARRAY CONTAINING EDITED DATA.                             Fixup
                                                                   Fixup
THE UNIFORM ENERGY GRID ENDS UP ON ISCRB. NEXT EACH SECTION OF     Fixup
CROSS SECTIONS FROM PASS1 IS READ FROM ISCRC, INTERPOLATED TO      Fixup
THE UNIFORM ENERGY GRID AND OUTPUT TO ISCRA. FINALLY ISCRA AND     Fixup
ISCRC ARE SWITCH, SO THAT AT THE END OF THIS PASS THE DATA WILL    Fixup
AGAIN BE ON ISCRC (EXACTLY AS AT THE END OF PASS1), WITH UPDATED   Fixup
POINT COUNTS.                                                      Fixup
ISCRA  - SCRATCH UNIT THAT UNIFORM ENERGY GRID DATA IS WRITTEN ON. Fixup
ISCRB  - SCRATCH UNIT CONTAINING UNIFORM ENERGY GRID.              Fixup
ISCRC  - SCRATCH UNIT THAT EDITED DATA IS READ FROM.               Fixup
TABA   - ARRAY CONTAINING UNIFORM ENERGY GRID DATA.                Fixup
TABB   - ARRAY CONTAINING UNIFORM ENERGY GRID.                     Fixup
TABC   - ARRAY CONTAINING EDITED DATA.                             Fixup
                                                                   Fixup
PASS3                                                              Fixup
=====                                                              Fixup
SUMMATION CROSS SECTIONS ARE DEFINED BY READING DATA FROM ISCRC    Fixup
AND MERGING THEM ONTO ISCRA. THE FIRST SECTION THAT CONTRIBUTES    Fixup
TO A SUM IS MERELY COPIED FROM C TO A. IF MORE SECTIONS WILL       Fixup
CONTRIBUTE TO THE SUM THE DATA IN A IS TRANSFERRED TO B, A         Fixup
SECTION OF DATA FROM C IS ADDED TO THE DATA IN B AND STORED IN     Fixup
A. THE CYLE OF ADDED C AND B TO A, FOLLOWED BY MOVING A TO B       Fixup
IS CONTINUED UNTIL ALL CONTRIBUTING SECTIONS HAVE BEEN ADDED.      Fixup
THE SUM IS THEN COPIED FROM A TO D. IF NEWLY CONSTRUCTED SECTION   Fixup
IS REQUIRED FOR ANY LATER SUMMUATIONS IT IS ALSO COPIED TO E.      Fixup
THE CYCLE OF ADDED SECTIONS FROM C AND B TO A IS REPEATED FOR      Fixup
```

```
EACH REQUIRED SUMMATION REACTION. IN ADDITION TO SECTIONS FROM     Fixup
C, AFTER THE FIRST SUMMATION SECTIONS MAY ALSO BE ADDED TO A      Fixup
FROM E (THE CONTRIBUTION OF NEW RECONSTRUCTED CROSS SECTIONS).    Fixup
WHEN ALL REQUIRED SECTIONS HAVE BEEN RECONSTRUCTED THE NEW        Fixup
SECTIONS WILL BE ON E AND THE ORIGINAL SECTIONS ON C.             Fixup
ISCRC  - SCRATCH FILE FROM WHICH ORIGINAL DATA IS READ.           Fixup
ISCRA  - SCRATCH FILE ONTO WHICH SUM FOR ONE SECTION IS WRITTEN.  Fixup
ISCRD  - SCRATCH FILE ONTO WHICH ALL SUM CROSS SECTIONS ARE       Fixup
         WRITTEN.                                                 Fixup
ISCRE  - SCRATCH FILE ONTO WHICH ALL SUM CROSS SECTIONS WHICH     Fixup
         ARE REQUIRED FOR LATER SUMS ARE WRITTEN.                 Fixup
ISCRB  - UTILITY SCRATCH FILE USED TO CREATE SUM CROSS SECTIONS.  Fixup
TABA   - ARRAY INTO WHICH SUMS ARE WRITTEN.                       Fixup
TABB   - ARRAY INTO WHICH PARTIAL SUMS ARE WRITTEN.               Fixup
TABC   - ARRAY INTO WHICH ORIGINAL DATA IS READ.                  Fixup
                                                                  Fixup
PASS4                                                             Fixup
=====                                                             Fixup
CROSS SECTIONS ARE READ FROM ISCRC (ORIGINAL) AND ISCRD (NEW)     Fixup
AND ARE WRITTEN IN THE ENDF FORMAT ON OTAPE. THE BEGINNING OF     Fixup
EACH SECTION OF ORIGINAL DATA IS READ FROM ISCRC (TO DEFINE       Fixup
SECTION HEADER INFORMATION). IF THIS MT HAS NOT BEEN RECOSTRUCTED Fixup
ON ISCRD THE ORIGINAL SECTION IS OUTPUT. IF THE SECTION HAS BEEN  Fixup
RECONSTRUCTED THE ORIGINAL SECTION IS SKIPPED AND THE NEW SECTION Fixup
IS OUTPUT.                                                        Fixup
OTAPE  - OUTPUT DATA IN THE ENDF FORMAT.                          Fixup
ISCRC  - SCRATCH FILE FROM WHICH ORIGINAL DATA IS READ.           Fixup
ISCRD  - SCRATCH FILE FROM WHICH NEW DATA IS READ.                Fixup
TABC   - ARRAY INTO WHICH CROSS SECTIONS ARE READ FROM SCRATCH    Fixup
         AND WRITTEN TO OTAPE                                     Fixup
                                                                  Fixup

                                                                      Fixup
                                                                      Fixup
 2.53000- 2   0  0                                                   Fixup
             (BLANK LINE TO TERMINATE ENERGY INSERTS)                 Fixup
                                                                      Fixup
WARNING                                                               Fixup
=======                                                               Fixup
ALTHOUGH THIS PROGRAM IS DESIGNED TO ALLOW REACTIONS TO BE DEFINED    Fixup
BY ADDING OR SUBTRACTING REACTIONS THE USER SHOULD ALWAYS TRY TO       Fixup
DEFINE REACTIONS BY SUMMING TO AVOID NEGATIVE CROSS SECTIONS. FOR     Fixup
EXAMPLE, IT IS POSSIBLE TO CALCULATE MT=3 AND DEFINE MT=1 AS THE      Fixup
SUM OF MT=2 AND 3 (THE RECOMMENDED APPROACH AS USED IN THE ABOVE      Fixup
INPUT). ALTERATIVELY IT IS POSSIBLE TO CALCULATE MT=1 AND DEFINE      Fixup
MT=3 AS MT=1 MINUS MT=2 (THIS APPROACH IS NOT RECOMMENDED).           Fixup
                                                                      Fixup
THE ONLY BUILT-IN SUMMATION RULE THAT USES SUBTRACTION IS THE         Fixup
CALCULATION OF THE FIRST CHANGE FISSION (MT=19) AS THE TOTAL          Fixup
FISSION (MT=18) MINUS THE SECOND, THIRD AND FOURTH CHANGE FISSION     Fixup
(MT=20, 21, 38). THIS HAS BEEN DONE TO ALLOW THE RESONANCE            Fixup
CONTRIBUTION, CALCULATED BY MANY CODES AND INCLUDED IN MT=18,         Fixup
TO BE CONSISTENTLY INCLUDED IN THE FIRST CHANCE FISSION.              Fixup
                                                                      Fixup
====================================================================== Fixup
```
