====================================================================== Virgin
                                                                       Virgin
     PROGRAM VIRGIN                                                    Virgin
     VERSION 76-1 (NOVEMBER 1976)                                      Virgin
     VERSION 84-1 (JUNE 1984)    *DOUBLE PRECISION ENERGY              Virgin
     VERSION 86-1 (JANUARY 1986)*FORTRAN-77/H VERSION                  Virgin
     VERSION 88-1 (JULY 1988)    *OPTION...INTERNALLY DEFINE ALL I/O   Virgin
                                  FILE NAMES (SEE, SUBROUTINE FILEIO   Virgin
                                  FOR DETAILS).                        Virgin
                                 *IMPROVED BASED ON USER COMMENTS.     Virgin
     VERSION 89-1 (JANUARY 1989)*PSYCHOANALYZED BY PROGRAM FREUD TO    Virgin
                                  INSURE PROGRAM WILL NOT DO ANYTHING  Virgin
                                  CRAZY.                               Virgin
                                 *UPDATED TO USE NEW PROGRAM CONVERT   Virgin
                                  KEYWORDS.                            Virgin
                                 *ADDED LIVERMORE CIVIC COMPILER       Virgin
                                  CONVENTIONS.                         Virgin
     VERSION 92-1 (JANUARY 1992)*COMPLETE RE-WRITE                     Virgin
                                 *OUTPUT IN PLOTTAB FORMAT             Virgin
                                 *UP TO 2000 THICKNESSES               Virgin
                                 *INCREASED INCORE PAGE SIZE TO 6000   Virgin
                                  CROSS SECTION POINTS                 Virgin
                                 *ADDED PHOTON CALCULATIONS            Virgin
                                 *ADDED BLACKBODY SPECTRUM             Virgin
                                 *ADDED MULTIPLE LAYERS                Virgin
                                 *ADDED SPATIALLY DEPENDENT DENSITY    Virgin
                                 *ADDED FORTRAN SAVE OPTION            Virgin
                                 *COMPLETELY CONSISTENT I/O ROUTINES -  Virgin
                                  TO MINIMIZE COMPUTER DEPENDENCE.     Virgin
     VERSION 92-2 (MAY 1992)     *CORRECTED TO HANDLE MULTIGROUP CROSS  Virgin
                                  SECTIONS AS INPUT IN ENDF/B FORMAT.  Virgin
     VERSION 96-1 (JANUARY 1996) *COMPLETE RE-WRITE                    Virgin
                                 *IMPROVED COMPUTER INDEPENDENCE       Virgin
                                 *ALL DOUBLE PRECISION                 Virgin
                                 *ON SCREEN OUTPUT                     Virgin
                                 *UNIFORM TREATMENT OF ENDF/B I/O      Virgin
                                 *IMPROVED OUTPUT PRECISION            Virgin
                                 *DEFINED SCRATCH FILE NAMES           Virgin
     VERSION 99-1 (MARCH 1999)   *CORRECTED CHARACTER TO FLOATING      Virgin
                                  POINT READ FOR MORE DIGITS           Virgin
                                 *UPDATED TEST FOR ENDF/B FORMAT       Virgin
                                  VERSION BASED ON RECENT FORMAT CHANGE Virgin
                                 *GENERAL IMPROVEMENTS BASED ON        Virgin
                                  USER FEEDBACK                        Virgin
     VERS. 2000-1 (FEBRUARY 2000)*GENERAL IMPROVEMENTS BASED ON        Virgin
                                  USER FEEDBACK                        Virgin
     VERS. 2002-1 (MAY 2002)     *OPTIONAL INPUT PARAMETERS            Virgin
     VERS. 2004-1 (MARCH 2004)   *ADDED INCLUDE FOR COMMON             Virgin
                                 *UP TO 2000 THICKNESSES               Virgin
                                 *INCREASED INCORE PAGE SIZE TO 60,000 Virgin
     VERS. 2007-1 (JAN.  2007)   *CHECKED AGAINST ALL ENDF/B-VII.      Virgin
                                 *INCREASED INCORE PAGE SIZE TO        Virgin
                                  240,000 FROM 60,000.                 Virgin
     VERS. 2007-2 (DEC.  2007)   *72 CHARACTER FILE NAME.              Virgin
     VERS. 2010-1 (Apr.  2010)   *General update based on user feedback Virgin
                                 *INCREASED INCORE PAGE SIZE TO        Virgin
                                  600,000 FROM 240,000.                Virgin
     VERS. 2012-1 (Aug.  2012)   *Added CODENAME                       Virgin
                                 *32 and 64 bit Compatible             Virgin
                                 *Added ERROR stop                     Virgin
     VERS. 2015-1 (Jan.  2015)   *Extended OUT9.                       Virgin
                                 *Replaced ALL 3 way IF Statements.    Virgin
                                 *Generalized TART Group Structures.   Virgin
                                 *Generalized SAND-II Group Structures. Virgin
                                 *Extended SAND-II to 60, 150, 200 MeV. Virgin
     VERS. 2015-2 (Apr.  2015)   *Changed ALL data to "D" instead of   Virgin
                                  "E" to insure it is REAL*8 and avoid Virgin
                                  Truncation ERRORS.                   Virgin
     VERS. 2017-1 (May   2017)   *Added UKAEA 1102 Group Structure.    Virgin
                                 *Increased points to 3,000,000        Virgin
                                 *Increased groupd to 30,000           Virgin
```

```
                          *Updated based on user feedback        Virgin
                          *Defintion of built-in group structure Virgin
                           using SUBROUTINE GROPE is identical   Virgin
                           for GROUPIE and VIRGIN.               Virgin
                          *All floating point parameters changed Virgin
                           to character inout + IN9 conversion.  Virgin
VERS. 2018-1 (Jan.  2018)  *Decreased PAGE size from 3,000,000   Virgin
                           to 1,500,000                          Virgin
                          *On-line output for ALL ENDERROR       Virgin
                                                                 Virgin
2015-2 Acknowledgment                                            Virgin
=====================                                            Virgin
I thank Andrej Trkov (NDS, IAEA) for finding the problem with    Virgin
the "E" formatted DATA (this effected both VIRGIN and GROUPIE).  Virgin
I also thank Andrej for overseeing the entire PREPRO project     Virgin
at IAEA, Vienna; he is part of a truly International team who    Virgin
worked together to produce PREPRO-2015-2, and to make it         Virgin
available Internationally on-line for FREE to ALL users.         Virgin
                                                                 Virgin
OWNED, MAINTAINED AND DISTRIBUTED BY                             Virgin

                                                                 Virgin
PURPOSE                                                          Virgin
-------                                                          Virgin
THIS PROGRAM IS DESIGNED TO CALCULATE UNCOLLIDED (I.E. VIRGIN)   Virgin
FLUX AND REACTIONS DUE TO TRANSMISSION OF A MONODIRECTIONAL       Virgin
BEAM OF NEUTRONS THROUGH ANY THICKNESS OF MATERIAL. IN ORDER     Virgin
TO SIMULATE AN EXPERIMENTAL MEASUREMENT THE RESULTS ARE GIVEN    Virgin
AS INTEGRALS OVER ENERGY TALLY GROUPS (AS OPPOSED TO POINTWISE   Virgin
IN ENERGY). BY TAKING THE RATIO OF REACTIONS TO FLUX IN EACH      Virgin
GROUP AN EQUIVALENT SPATIALLY DEPENDENT GROUP AVERAGED CROSS     Virgin
SECTION IS CALCULATED BY THE PROGRAM.                            Virgin
                                                                 Virgin
EVALUATED DATA                                                   Virgin
--------------                                                   Virgin
THE EVALUATED DATA MUST BE IN THE ENDF/B FORMAT. HOWEVER IT      Virgin
MUST BE LINEAR-LINEAR INTERPOLABLE IN ENERGY-CROSS SECTION       Virgin
BETWEEN TABULATED POINTS. SINCE ONLY CROSS SECTIONS (FILE 3 OR 23) Virgin
ARE USED, THIS PROGRAM WILL WORK ON ANY VERSION OF ENDF/B        Virgin
(I.E. ENDF/B-I, II, III, IV, V OR VI).                           Virgin
                                                                 Virgin
RELATED COMPUTER CODES                                           Virgin
----------------------                                           Virgin
IN ORDER TO CONVERT ENDF/B DATA TO THE FORM REQUIRED BY THIS CODE Virgin
THE FOLLOWING COMPUTER CODES MAY BE USED,                        Virgin
                                                                 Virgin
LINEAR  - CONVERT FROM GENERAL ENDF/B INTERPOLATION TO LINEAR-   Virgin
          LINEAR INTERPOLATION.                                  Virgin
RECENT  - ADD THE RESONANCE CONTRIBUTION TO TABULATED BACKGROUND Virgin
          CROSS SECTIONS TO OBTAIN LINEAR-LINEAR INTERPOLABLE    Virgin
          RESULTS.                                               Virgin
SIGMA1  - DOPPLER BROADEN CROSS SECTION TO OBTAIN LINEAR-LINEAR  Virgin
```

```
          INTERPOLABLE RESULTS.                                          Virgin
MIXER   - MIX INDIVIDUAL MATERIALS TOGETHER TO DEFINE COMPOSITE          Virgin
          MIXTURES, E.G., COMBINE MATERIALS TO DEFINE STAINLESS          Virgin
          STELL.                                                         Virgin
                                                                         Virgin
IN ORDER TO PLOT THE OUTPUT RESULTS OF THIS CODE USE PROGRAM              Virgin
PLOTTAB.                                                                 Virgin
                                                                         Virgin
COPIES OF ANY OR ALL OF THESE CODES MAY BE OBTAINED FROM D.E.            Virgin
CULLEN AT THE ABOVE ADDRESS.                                             Virgin
                                                                         Virgin
OUTPUT FORMAT                                                            Virgin
-------------                                                            Virgin
FOR ALL VERSIONS OF THIS PROGRAM PRIOR TO VERSION 92-1 OUTPUT WAS        Virgin
IN TABULAR FORM.                                                         Virgin
                                                                         Virgin
FOR VERSION 92-1 AND LATER VERSIONS OF THIS CODE ALL OUTPUT IS IN         Virgin
THE PROGRAM PLOTTAB FORMAT TO ALLOW RESULTS TO BE EASILY PLOTTED.        Virgin
FOR A COPY OF PROGRAM PLOTTAB CONTACT D.E. CULLEN AT THE ABOVE           Virgin
ADDRESS.                                                                 Virgin
                                                                         Virgin
TALLY GROUPS                                                             Virgin
------------                                                             Virgin
THE TALLY GROUP STRUCTURE MAY BE ANY SET OF MONONTONICALLY               Virgin
INCREASING ENERGY BOUNDARIES. THERE MAY BE UP TO 2000 TALLY              Virgin
GROUPS. BY USING THE INPUT PARAMETERS THE USER MAY SPECIFY ANY            Virgin
ARBITRARY TALLY GROUP STRUCTURE OR SELECT ONE OF THE FOLLOWING           Virgin
BUILT-IN GROUP STRUCTURES.                                               Virgin
                                                                         Virgin

(18) SAND-II 765 GROUPS - 1.0D-5 eV UP TO 200 MEV                        Virgin
(19) UKAEA  1102 GROUPS - 1.0D-5 eV UP TO 1 GeV                          Virgin
                                                                         Virgin
 INCIDENT SPECTRUM                                                       Virgin
 -----------------                                                       Virgin
 THE INCIDENT SPECTRUM MAY BE ANY TABULATED FUNCTION THAT IS             Virgin
 GIVEN BY A SET OF POINTS THAT IS MONOTONICALLY INCREASING IN            Virgin
 ENERGY AND LINEAR-LINEAR INTERPOLABLE IN ENERGY-SPECTRUM                Virgin
 BETWEEN TABULATED POINTS. THERE IS NO LIMIT TO THE NUMBER OF            Virgin
 POINTS USED TO DESCRIBE THE SPECTRUM. THERE ARE FIVE BUILT-IN           Virgin
 OPTIONS FOR THE SPECTRUM.                                               Virgin
                                                                         Virgin
 (1) CONSTANT...ENERGY INDEPENDENT (INPUT 0)                             Virgin
 (2) 1/E (INPUT 1)                                                       Virgin
 (3) BLACKBODY - PHOTON SPECTRUM                                         Virgin
 (4) BLACKBODY - ENERGY SPECTRUM (E TIMES THE PHOTON SPECTRUM)           Virgin
 (5) TRANSMITTED SPECTRUM FROM PREVIOUS CASE                             Virgin
                                                                         Virgin
 NORMALIZATION OF SPECTRUM                                               Virgin
 -------------------------                                               Virgin
 ANY INCIDENT SPECTRUM, EITHER READ AS INPUT OR ONE OF THE               Virgin
 BUILT-IN SPECTRA, WILL BE NORMALIZED TO UNITY WHEN INTEGRATED           Virgin
 OVER THEIR ENTIRE ENERGY RANGE.                                         Virgin
                                                                         Virgin
```

TRANSMITTED SPECTRA WILL NOT BE RE-NORMALIZED, SINCE IT ALREADY INCLUDES THE NORMALIZATION OF THE INCIDENT SPECTRUM.

NOTE, INCIDENT SPECTRA IS NORMALIZED TO UNITY OVER THEIR ENTIRE ENERGY RANGE - NOT OVER THE ENERGY RANGE OF THE GROUPS. IF THE ENERGY RANGE OF THE GROUPS IS LESS THAN THAT OF THE SPECTRUM ONLY THAT PORTION OF THE SPECTRUM WILL BE USED AND THIS WILL NOT BE RE-NORMALIZED TO UNITY.

COMPOSITION OF A LAYER

YOU MAY RUN PROBLEMS INVOLVING

1) A LAYER OF UNIFORM DENSITY - DENSITY FOR ATTENUATION IS THAT OF THE TOTAL. DENSITY FOR REACTIONS IS THAT OF THE REACTION.
2) A LAYER OF UNIFORM DENSITY - DENSITY IS THE SUM OF THE TOTAL AND REACTION DENSITIES - THE SUM OF THE CROSS SECTIONS IS USED FOR ATTENUATION AND REACTIONS.
3) A LAYER OF VARYING DENSITY BASED ON A UNIFORM TOTAL DENSITY PLUS A VARIATION BETWEEN 0 AND A MAXIMUM BASED ON THE REACTION DENSITY - 0 AT 0 THICKNESS AND MAXIMUM AT MAXIMUM THICKNESS. IN THIS CASE THE AVERAGE REACTION DENSITY IS EQUAL TO THE INPUT REACTION DENSITY. THE VARIATION IN REACTION DENSITY CAN BE LINEAR, SQUARE OR CUBIC.
4) A LAYER OF VARYING DENSITY BASED ON A TOTAL DENSITY WHICH VARYING FROM MAXIMUM AT 0 THICKNESS TO 0 AT MAXIMUM THICKNESS PLUS A REACTION DENSITY WHICH VARIES FROM 0 AT 0 THICKNESS TO MAXIMUM AT MAXIMUM THICKNESS. IN THIS CASE THE AVERAGE DENSITY OF THE TOTAL AND REACTION WILL BOTH BE EQUAL TO THE INPUT TOTAL AND REACTION DENSITIES. THE VARIATION IN TOTAL AND REACTION DENSITY CAN BE LINEAR, SQUARE OR CUBIC.

IN THE FIRST CASE THE TWO REQUESTED CROSS SECTIONS ARE CONSIDERED TO BE INDEPENDENT - THE TOTAL CROSS SECTION IS USED TO CALCULATE ATTENUATION AND THE REACTION CROSS SECTION IS USED TO CALCULATE REACTIONS, E.G., TRANSMISSION THROUGH NATURAL URANIUM (THE TOTAL CROSS SECTION SHOULD BE THAT OF NATURAL URANIUM) AND REACTIONS IN A U-235 DETECTOR (THE REACTION CROSS SECTION SHOULD BE THAT OF U-235).

IN THE OTHER THREE CASES THE TWO REQUESTED CROSS SECTIONS ARE TREATED AS TWO CONSTITUENTS OF A MIXTURE OF TWO MATERIALS AND THE TWO CROSS SECTIONS ARE USED BOTH TO DEFINE A TOTAL CROSS SECTION FOR ATTENUATION AND A REACTION CROSS SECTION TO DEFINE REACTIONS. IN THESE CASES THE MIXTURE WILL VARY CONTINUOUSLY, E.G., IN CASE 4) HALF WAY THROUGH THE LAYER THE COMPOSITION WILL BE 1/2 THE MATERIAL DEFINED BY THE TOTAL AND 1/2 THE MATERIAL BASED ON THE REACTION. IN THESE CASES RATHER THAN THINKING OF THE TWO CROSS SECTIONS AS A TOTAL AND REACTION CROSS SECTION, IT IS BETTER TO THINK OF THEM AS THE TOTAL CROSS SECTIONS FOR MATERIALS A AND B AND THE CALCULATED REACTIONS WILL BE BASED ON THESE TWO TOTAL CROSS SECTIONS.

MULTIPLE LAYERS

THIS CODE MAY BE USED TO RUN EITHER A NUMBER OF INDEPENDENT PROBLEMS, EACH INVOLVING TRANSMISSION THROUGH A SINGLE LAYER OF MATERIAL, OR TRANSMISSION THROUGH A NUMBER OF LAYERS ONE AFTER THE OTHER.

IN THE CASE OF MULTIPLE LAYERS, ONE LAYER AFTER ANOTHER, THE TRANSMITTED ENERGY DEPENDENT SPECTRUM IS USED AS THE INCIDENT SPECTRUM FOR THE NEXT LAYER. THERE IS NO LIMIT TO THE NUMBER OF LAYERS WHICH MAY BE USED - EACH LAYER IS TREATED AS A COMPLETELY INDEPENDENT PROBLEM WITH A DEFINED INCIDENT SOURCE, AND AS SUCH THE CYCLE OF TRANSMISSION THROUGH EACH LAYER AND USING THE TRANSMITTED SPECTRUM AS THE INCIDENT SPECTRUM FOR THE NEXT LAYER MAY BE REPEATED ANY NUMBER OF TIMES.

REMEMBER - THE INCIDENT SPECTRUM IS ASSUMED TO BE LINEARLY INTERPOLABLE IN ENERGY AND SPECTRUM BETWEEN THE ENERGIES AT WHICH IT IS TABULATED. THE TRANSMITTED SPECTRUM WILL BE TABULATED

```
AT THE UNION OF ALL ENERGIES OF THE INCIDENT SPECTRUM AND CROSS    Virgin
SECTIONS (TOTAL AND REACTION). IN ORDER TO INSURE THE ACCURACY     Virgin
OF THE RESULT WHEN PERFORMING MULTIPLE LAYER CALCULATION BE SURE   Virgin
TO SPECIFY THE INCIDENT SPECTRUM ON THE FIRST LAYER TO SUFFICIENT  Virgin
DETAIL (ENOUGH ENERGY POINTS CLOSELY SPACED TOGETHER) IN ORDER TO  Virgin
ALLOW THE TRANSMITTED SPECTRUM TO BE ACCURATELY REPRESENTED BY     Virgin
LINEAR INTERPOLATION BETWEEN SUCCESSIVE ENERGY POINTS - THERE IS   Virgin
NO LIMIT TO THE NUMBER OF POINTS ALLOWED IN THE INCIDENT SPECTRUM, Virgin
SO IF YOU ARE IN DOUBT, SIMPLY USE MORE ENERGY POINTS TO SPECIFY   Virgin
THE INCIDENT SPECTRUM.                                             Virgin
                                                                   Virgin
RESULT OUTPUT UNITS                                                Virgin
------------------                                                 Virgin
FLUX      = EXACTLY AS CALCULATED                                  Virgin
REACTIONS = 1/CM OR 1/GRAM                                         Virgin
AVERAGE   = 1/CM - MACROSCOPIC UNITS                               Virgin
CROSS                                                              Virgin
SECTION                                                            Virgin
                                                                   Virgin
THICKNESS AND DENSITY                                              Virgin
---------------------                                              Virgin
THE UNCOLLIDED CALCULATION ONLY DEPENDS ON THE PRODUCT OF          Virgin
THICKNESS AND DENSITY (I.E. GRAMS PER CM SQUARED). THIS FACT       Virgin
MAY BE USED TO SIMPLIFY INPUT BY ALLOWING THE THICKNESS AND        Virgin
DENSITY TO BE GIVEN EITHER AS CM AND GRAMS/CC RESPECTIVELY         Virgin
OR ELSE TO GIVE THICKNESS IN GRAMS/(CM*CM) AND INPUT A             Virgin
DENSITY OF 1.0 - OR IN ANY OTHER CONVENIENT UNITS AS LONG AS       Virgin
THE PRODUCT OF THICKNESS AND DENSITY IS IN THE CORRECT GRAMS       Virgin
PER CENTIMETER SQUARED.                                            Virgin
                                                                   Virgin
GRAMS/(CM*CM) ARE RELATED TO ATOMS/BARN THROUGH THE RELATIONSHIP   Virgin
                                                                   Virgin
GRAMS/(CM*CM)=(ATOMS/BARN)*(GRAMS/MOLE)*(MOLE/ATOM)                Virgin
                                                                   Virgin
OR...                                                              Virgin
                                                                   Virgin
GRAMS/(CM*CM)=(ATOMS/BARN)*(ATOMIC WEIGHT)/0.602                   Virgin
                                                                   Virgin
CROSS SECTIONS AT A SPACE POINT AND OPTICAL THICKNESS              Virgin
----------------------------------------------------               Virgin
THIS PROGRAM ALLOWS LAYERS OF EITHER UNIFORM DENSITY OR            Virgin
CONTINUOUSLY VARYING DENSITY. THE DENSITY CAN BE ONE OF THE        Virgin
FOLLOWING FORMS,                                                   Virgin
1) C                    = UNIFORM DENSITY                          Virgin
2) C*2*(X/T)            = LINEAR VARIATION FROM 0 TO C             Virgin
3) C*(2-2*(X/T))        = LINEAR VARIATION FROM C TO 0             Virgin
4) C*3*(X/T)**2         = SQUARE VARIATION FROM 0 TO C             Virgin
5) C*(3-3*(X/T)**2)/2   = SQUARE VARIATION FROM C TO 0             Virgin
6) C*4*(X/T)**3         = CUBIC VARIATION FROM 0 TO C              Virgin
7) C*(4-4*(X/T)**3)/3   = CUBIC VARIATION FROM C TO 0              Virgin
                                                                   Virgin
IN ORDER TO CALCULATE REACTIONS AT A POINT THE MICROSCOPIC         Virgin
REACTION CROSS SECTION NEED MERELY BE SCALED BY THESE DENSITIES.   Virgin
                                                                   Virgin
IN ORDER TO CALCULATE TRANSMISSION WE MUST DEFINE THE OPTICAL      Virgin
PATH LENGTH WHICH MAY BE DEFINED BY INTEGRATING EACH OF THE        Virgin
ABOVE DENSITY FORMS TO FIND,                                       Virgin
1) C*X                                                             Virgin
2) C*X*(X/T)                                                       Virgin
3) C*X*(2-(X/T))                                                   Virgin
4) C*X*(X/T)**2                                                    Virgin
5) C*X*(3-(X/T)**2)/2                                              Virgin
6) C*X*(X/T)**3                                                    Virgin
7) C*X*(4-(X/T)**3))/3                                             Virgin
                                                                   Virgin
IN ORDER TO CALCULATE TRANSMISSION TO A POINT THE MICROSCOPIC      Virgin
TOTAL CROSS SECTION NEED MERELY BE SCALED BY THESE DENSITIES       Virgin
TO DEFINE THE OPTICAL PATH LENGTH.                                 Virgin
                                                                   Virgin
THE VARIATION OF THE DENSITY THROUGH THE LAYER MAY BE DEFINED      Virgin
BY SETTING X = 0 OR X = T TO FIND,                                 Virgin
```

```
   X = 0      X = T                                                    Virgin
   -----      -----                                                    Virgin
1) C          C                                                        Virgin
2) 0          2*C                                                      Virgin
3) 2*C        0                                                        Virgin
4) 0          3*C                                                      Virgin
5) 3*C/2      0                                                        Virgin
6) 0          4*C                                                      Virgin
7) 4*C/3      0                                                        Virgin
                                                                       Virgin
THE OPTICAL PATH THROUGH A LAYER OF THICKNESS T MAY BE DEFINED         Virgin
FROM THE ABOVE EXPRESSIONS BY SETTING X=T TO FIND THAT IN ALL          Virgin
CASES THE ANSWER WILL BY C*T. THE CONSTANTS IN THE ABOVE               Virgin
EXPRESSIONS HAVE BEEN INTRODUCED IN ORDER TO FORCE THIS RESULT.        Virgin
WITH THESE FACTORS THE OPTICAL PATH LENGTH THROUGH THE LAYER           Virgin
WILL EXACTLY CORRESPOND TO AN AVERAGE DENSITY CORRESPONDING TO         Virgin
THAT INPUT FOR THE TOTAL AND/OR REACTION, I.E., C CORRESPONDS          Virgin
TO THE INPUT DENSITY.                                                  Virgin
                                                                       Virgin
NOTE - FOR THE SAME OPTICAL PATH LENGTHS THROUGH THE LAYER THE         Virgin
TRANSMISSION WILL BE EXACTLY THE SAME. HOWEVER, VARYING THE            Virgin
DENSITY WILL ALLOW YOU TO MODIFY THE REACTION RATES AT SPECIFIC        Virgin
DEPTHS INTO THE LAYER.                                                 Virgin
                                                                       Virgin
COMPUTATION OF INTEGRALS                                               Virgin
------------------------                                               Virgin
STARTING FROM TOTAL CROSS SECTIONS, REACTION CROSS SECTIONS AND        Virgin
A SOURCE SPECTRUM ALL OF WHICH ARE GIVEN IN TABULAR FORM WITH          Virgin
LINEAR INTERPOLATION BETWEEN TABULATED POINTS ALL REQUIRED             Virgin
INTEGRALS CAN BE DEFINED BY ANALYTICAL EXPRESSIONS INVOLVING           Virgin
NOTHING MORE COMPLICATED THAN EXPONENTIALS. THE INTEGRALS THAT         Virgin
MUST BE EVALUATED ARE OF THE FORM...                                   Virgin
                                                                       Virgin
FLUX                                                                   Virgin
----                                                                   Virgin

                                                                      Virgin
EXAMPLE INPUT NO. 2                                                   Virgin
-------------------                                                   Virgin
CALCULATE THE UNCOLLIDED PHOTON FLUX THROUGH A MIXTURE OF SILICON     Virgin
AND IRON FOR 100 MEV PHOTONS INCIDENT. THE TRANSMISSION WILL BE       Virgin
CALCULATED FOR 21 THICKNESSES VARYING BETWEEN 0 AND 1 CM. THERE       Virgin
WILL BE ONLY 1 TALLY GROUP SPANNING A VERY NARROW ENERGY RANGE        Virgin
NEAR 100 MEV, AND THE SOURCE SPECTRUM WILL BE CONSTANT OVER THE       Virgin
SAME ENERGY RANGE. USE THE STANDARD ENDF/B INPUT DATA FILENAME        Virgin
BY LEAVING THE FIRST INPUT LINE BLANK.                                Virgin
                                                                      Virgin
(THIS IS A BLANK LINE TO USE THE STANDARD INPUT FILENAME)             Virgin
100 MEV PHOTONS                                                       Virgin
SILICON + 5 % IRON                                                    Virgin
