Nuclear Physics Research in the USSR

Collected Abstracts

Issues 23, 24 and 25 (1977)

Tables of Content

(Copies of original articles are available from the
Nuclear Data Section)

December 1981

TABLE OF CONTENT

Volume 23

	<u>Page</u>
<u>Institute of Physics and Energetics, Obninsk</u>	
1. V.N. Kononov, et al Fast neutron radiative capture cross-sections for ^{115}In , ^{181}Ta , ^{197}Au and isotopes of samarium and europium	3
2. G.N. Andriyakhina, et al Comparison of experimental neutron radiative capture data for some actinide isotopes irradiated in the BR-5 reactor	9
3. A.N. Davletchin, V.A. Tolstikov The analysis of the methodology of fast monoenergetic neutron flux measurements using proton recoil propor- tional counters	9
<u>Institute of Theoretical and Experimental Physics, Moscow</u>	
4. V.P. Bolotskij, et al Measurement of the capture to fission ratio for ^{239}Pu	12
<u>V.G. Khlopin Radium Institute, Leningrad</u>	
5. V.M. Adamov, et al Absolute measurement of the fast neutron fission cross- sections of heavy elements	17
<u>Institute of Nuclear Research of the Ukrainian Academy of Sciences, Kiev</u>	
6. I.A. Korzh, et al Differential neutron scattering cross-section at 1.5 to 3.0 MeV for titanium, iron and bismuth nuclei	21
7. I.A. Korzh, et al Investigation of the scattering of neutrons by even- even isotopes of chromium at 1.5 to 3.0 MeV	25
<u>All Union Scientific Research Institute of Physico- Technical and Radio-Technical Measurements</u>	
8. R.D. Vassiliev, et al Measurement of the thermal neutron absorption cross- section of hydrogen and vanadium	28

Moscow Engineering-Physics Institute

9. P.N. Alekseev, et al	30
Two-dimensional multigroup diffusion programme for reactor calculations of the neutron flux, the adjoint flux, and the importance function. (Programme PENAP-DTV)	
10. E.I. Sharov, S.M. Zaritzkij	32
The NUMER computer programme series	

Volume 24

	<u>Page</u>
<u>Institute of Physics and Energetics, Obninsk</u>	
1. N.V. Kornilov, et al The neutron emission spectrum of ^{238}U	3
2. O.A. Shcherbakov, et al The radiative capture and total cross-sections of ^{56}Fe for slow neutrons	3
<u>I.V. Kurchatov Institute of Atomic Energy, Moscow</u>	
3. S.K. Lissin, et al Fission product yield from ^{232}Th neutron fission	8
4. E.F. Fomushkin, et al Measurement of the $\sigma_f(^{239}\text{Pu})/\sigma_f(^{235}\text{U})$ ratio in the 0.27 to 9.85 MeV energy range	10
5. M.V. Savin, et al Cross-section for the production of discreet γ -lines from the (n,x) reaction in lead at $E_n = 1-10$ MeV	11
6. A.K. Brodskaya, et al Spectrum averaged fission neutron cross-sections for the (n, α), (n,p), (n,2n) and (n,n') reactions for a number of elements	15
7. A.S. Tyapin, V.E. Marshalkin The distribution of fission widths in the double-hump fission barrier model	16
8. B.M. Uzuyba, et al Allowed calculational simplification in the strong channel coupling method	16
<u>V.G. Khlopin Radium Institute, Leningrad</u>	
9. Yu. V. Kholjnov, et al Radiation characteristics of radioisotopes occurring in industry. Evaluated data	17
10. I.M. Cooks, et al Search for asymmetrical fission of bismuth by α -particles near the threshold	18

11.	V.M. Adamov, et al	19
	Absolute measurement of the ^{237}Np fission cross-section by ^{252}Cf fission spectrum neutrons	
12.	Yu.N. Trofimov	21
	Approximate calculation of the (n,p) type reaction cross-section in the maximum region of the excitation function	
13.	A.M. Heidelman, L.A. Rasumovskij	23
	The investigation of the dependence of the inverse scattering coefficient for alpha-particles as a function of sample substrate thickness	
14.	V.A. Rubtchenya, G.A. Tutin	23
	Determination of the interaction potential parameters for heavy ions on the basis of nuclear fission data	

Scientific Research Institute for Atomic Reactors,
Dimitrovgrad

15.	Yu.B. Novikov, V.Ya. Gabeskiriya	25
	Measurement of the effective α value for ^{235}U in reactors I and II of the NVAEC block	

Volume 25

	<u>Page</u>
<u>Institute of Physics and Energetics, Obninsk</u>	
1. B.I. Fursov, et al The measurement of fission cross-section ratio of ^{239}Pu and ^{235}U in the 0.024-7.4 MeV energy range	3
2. B.I. Fursov, et al The measurement of the ^{233}U and ^{241}Pu fission cross-section relative to the ^{235}U fission cross- section in the 0.024-7.4 MeV energy range	10
3. V.M. Piksaikin, et al ^{252}Cf fission neutrons emitted at shallow angles to the fission axis	17
4. N.S. Biryukov, et al Scattering of 9.1 ± 0.2 MeV neutron by ^7Li	18
5. N.S. Birunkov, et al Neutron angular distribution from the $^{181}\text{Ta}(p,n)^{181}\text{W}$ and $^{181}\text{Ta}(n,n')^{181}\text{Ta}$ reactions	22
6. V.Ya. Baryba, et al Energy and angular distribution of neutrons from 2.47 MeV neutron interaction with ^{238}U	30
7. V.N. Kononov, et al Averaged fast neutron radiative capture cross-sections. Part II. Capture cross-sections for even-even isotopes of neodymium, samarium, gadolinium and erbium	33
<u>I.V. Kurchatov Institute of Atomic Energy, Moscow</u>	
8. V.M. Morozov, et al A thin gas target for neutron experiments	41
9. P.E. Vorotnikov, et al Production of a fissionable isomer in the course of inelastic neutron scattering on ^{238}U	42
<u>V.G. Khlopin Radium Institute, Leningrad</u>	
10. V.M. Blinov, et al Measurement of the ^{252}Cf spontaneous fission neutron spectrum	43

11. A.I. Bozdanov, et al 45
Brome-silver track detectors
12. Yu.A. Nemilov, Yu.N. Trofimov 46
The ^{58}Ni , ^{56}Fe and ^{64}Zn (n,p) reaction cross-
sections at 7.6 - 9.3 MeV neutron energies

Scientific Research Institute for Atomic Reactors,
Dimitrovgrad

13. V.D. Gavrilov, V.A. Gontcharov 49
Thermal neutron cross-sections and radiative
capture resonance integrals for the $^{244-248}\text{Cm}$ and
 ^{250}Cf isotopes
14. V.A. Poruchikov, et al 54
Investigation of neutron resonances in the
0.5 - 20.0 eV energy range

Institute of Nuclear Research of the Ukrainian Academy of
Sciences, Kiev

15. V.F. Razbudej, et al 57
Investigation of the interaction of slow neutrons
with the ^{106}Cd , ^{108}Cd and ^{110}Cd isotopes
16. I.A. Korzh, et al 63
Use of the statistical theory for the prediction of
the inelastic neutron scattering cross-section
