Настоящий обзор подготовлен сотрудниками Центра данных фотоядерных экспериментов Научно-исследовательского института ядерной физики Московского государственного университета.

Сборник продолжает цикл информационных выпусков фотоядерных данных по различным разделам физики электромагнитных взаимодействий.

Сборник включает в себя основные результаты исследований сечений реакций фоторасщепления изотопов лития, опубликованные в научной литературе за период с 1955 по 1982 год включительно.

Физические результаты приводятся в виде таблиц и графиков. Цифровые данные записаны в ЦДФЭ НИИЯФ МГУ на магнитную ленту в международном обменном формате EXFOR.

Надеюсь, что данный и последующие информационные выпуски ЦДФЭ НИИЯФ МГУ будут способствовать прогрессу фотоядерных исследований.

The present issue has been prepared by
collaborators of the Centre for Photonuclear
Experiments Data of the Institute of
Nuclear Physics of the Moscow State University.

The volume opens a series of the information issues of photonuclear data on various fields of electromagnetic interaction physics.

The volume includes the main results of the studies of the reaction cross sections of lithium isotopes photodisintegration published in the literature since 1955 till 1982 inclusive.

Physical results are given in form of tables and graphs. The digital data have been recorded in the INP MSU CDFE on the magnetic tape using the EXFOR international exchange format.

I hope that this information issue and the following ones will assist in the advancement of the photonuclear science.

I. ПРЕДИСЛОВИЕ

Настоящий сборник продолжает серию информа-
ционных выпусков Центра данных фотоядерных
экспериментов НИИФ МГУ.

Сборник включает в себя результаты иссле-
дований реакций фоторасщепления изотопов ли-
тия, выполненных за последние 30 лет. Главным
образом охватывается область энергий гигант-
ских мультипольных резонансов ($E^* \leq 30$ МэВ):
приводятся данные по сечениям реакций.

Результаты работ приводятся в виде таблиц
и графиков. Все основные цифровые данные за-
писаны на магнитную ленту в международном об-
менном формате EXFOR.

Кроме таблиц, цифровых данных и графиков
сборник включает в себя библиографию работ,
авторский указатель.

Данный информационный выпуск не претендует
на абсолютную полноту. В него включены, в ос-
новном, наиболее известные данные, опублико-
ванные в периодической научной литературе.

II. ТАБЛИЦЫ ЦИФРОВЫХ ДАННЫХ И ГРАФИКИ

II.1. Пояснения к таблицам

В таблицах в систематизированном виде при-
водятся цифровые данные из работ, вошедших в
выпуск. Основа - информация в международном
обменном формате EXFOR с магнитной ленты
TRANS Li01.

По правилам формата EXFOR любая работа
представляется в виде совокупности подработ,
в каждой из которых содержится информация об
исследованной физической величине определен-
ного типа, например, выходе, сечении, угло-
вом распределении и т.д. В этой связи инфор-
мация в таблицах систематизирована по отдель-
ным изотопам лития. Внутри каждого такого
раздела информация рассортирована по типу
реакции в следующей последовательности:
(J,abs),(J,X),(J,n),(J,p),(J,d),(J,t),(J, α).

Данные, полученные для лития в естествен-
ной смеси изотопов объединены с данными для
изотопа ^{7}Li (распространенность - 92.5%).

I. PREFACE

The present volume starts a series of in-
formation issues of the Centre for Photonuc-
lear Experiments Data of the INP MSU.

The volume included the results of studies
of the reactions of lithium isotopes photo-
disintegration, carried out over the last
three decades. The energy region of giant
multipole resonances ($E^* \leq 30$ MeV) is mainly
comprised: the data on cross sections are
presented.

The results are presented in form of ta-
bles and graphs. All principal digital data
have been recorded on the magnetic tape using
the EXFOR international exchange format.

Apart from the tables of digital data and
graphs, the volume includes a bibliography
and author index.

The present information issue does not
claim to be very thorough. It mainly con-
tains the well-known data published in the
periodic scientific literature.

II. TABLES OF DIGITAL DATA AND GRAPHS

II.1. Explanations of the tables

The tables systematically present the di-
gital data from the works of issue. The base
- information prepared in the international
exchange format EXFOR from the magnetic tape
TRANS Li01.

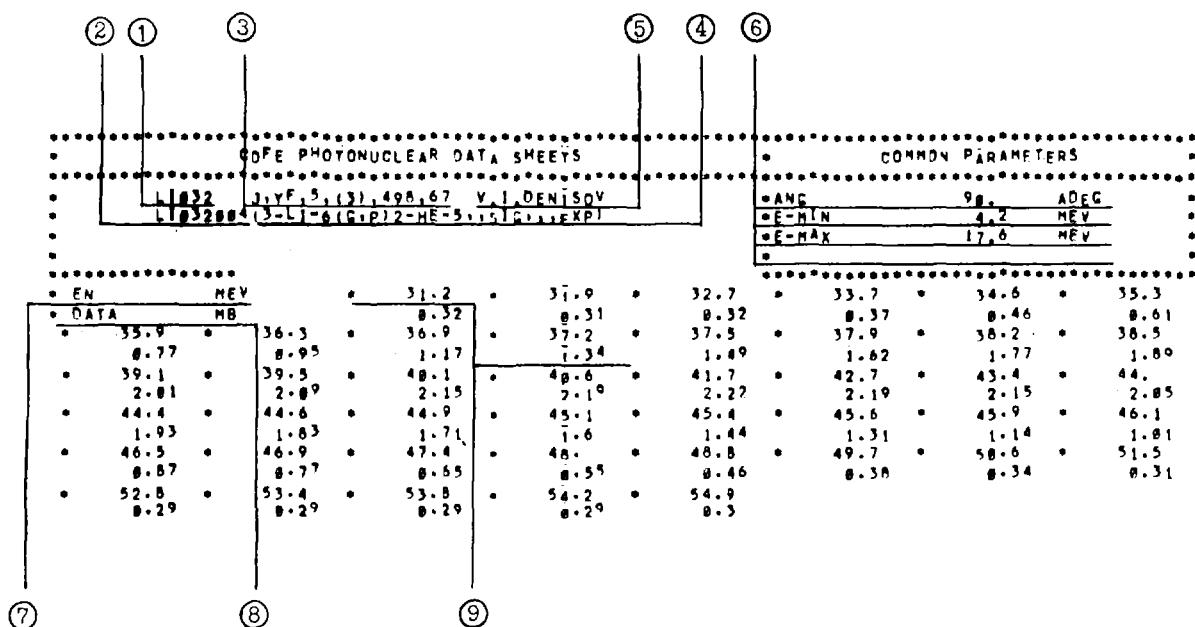

According to the EXFOR rules, any work is
presented as a set of subworks, each contain-
ing information about the physical quantity
studied, e.g., yield, cross section, angular
distribution, etc. In this connection the ta-
bulated information has been systematized ac-
cording to the individual lithium isotopes.
Within each section information is sorted
out according to the reaction type in the or-
der: (J,abs),(J,X),(J,n),(J,p),(J,d),(J,t),
(J, α).

The data for natural lithium are combined
with those for isotope ^{7}Li (abundance -
- 92.5%).

Каждая таблица, относящаяся к отдельной подработке, то есть содержащая цифровые данные о конкретной измеренной физической величине, включает в себя и некоторые общие описательные сведения, характеризующие как саму подработку, так и работу в целом. Хотя это и приводит к некоторому дублированию, однако, делает каждую таблицу в отдельности и все вместе весьма удобными для использования.

В целях более плотного расположения материала цифровые данные в таблицах приводятся по строчному принципу - значения аргументов возрастают слева-направо и сверху-вниз.

Принцип расположения информации в таблице иллюстрируется на схеме:

В указанных полях таблицы приводится следующая информация:

- ① Номер работы - LINNN, где LI - код темы выпуска (LITHIUM), а NNN - трехзначный порядковый номер работы в библиографии.
- ② Номер подработки - LINNNnnn, где nnn - трехзначный номер данной подработы в работе с номером NNN.

Each table referred to an individual sub-work, i.e., containing digital data on some specific physical quantity measured, also includes general descriptive information that characterizes both the subwork itself and a work as a whole. Although these results are in any publication, this also makes each separate table and all of them taken together highly convenient for use.

To present information in a more compact form, we give the tabulated digital data as rows, i.e., the values of arguments increase from left to right and from top to bottom.

The principle of arrangement of information is illustrated in the scheme:

In the above fields of the table, the following information is contained:

- ① Work number - LINNN, where LI is the code of the issue's subject-matter (LITHIUM), NNN - is the three-digit index number of the work in bibliography.
- ② Subwork number - LINNNnnn, where nnn is the three-digit index number of the given subwork in the work with index number NNN.

- ③ Ссылка - кодированное по правилам формата EXFOR обозначение печатного издания, в котором была опубликована работа, с полями:

F1, F2, VVV, pppp, YY,

где

F1 - код типа ссылки,

F2 - код ссылки,

VVV - том,

pppp - страницы,

YY - год.

Словарь кодов приводится в разделе II.2.

- ③ Reference - coded by the EXFOR rules designation of the publication source of a work with fields:

where

F1 - code of type of reference,

F2 - code of reference,

VVV - volume,

pppp - pages,

YY - year.

The dictionary of codes is given in Section II.2.

- ④ Реакция - кодированное по правилам формата EXFOR обозначение исследованной в подработе реакции

(SF1(SF2,SF3)SF4, SF5, SF6, SF7, SF8, SF9),

где

SF1 - код ядра мишени,

SF2 - код налетающей частицы,

SF3 - код частицы-продукта или символ реакции,

SF4 - код конечного ядра,

SF5 - код ветви реакции,

SF6 - код измеренной величины (параметр),

SF7 - код частицы, к которой относится параметр,

SF8 - модификатор,

SF9 - код типа данных,

По правилам формата EXFOR отдельные вспомогательные поля, разделенные запятыми, могут быть опущены.

Словарь кодов приводится в разделе II.2.

- ④ Reaction - coded by EXFOR rules designation of the reaction investigated in a given work

where

SF1 - code of target nucleus,

SF2 - code of projectile,

SF3 - code of the product or symbol of the reaction,

SF4 - code of final nucleus,

SF5 - code of reaction branch,

SF6 - code of quantity (parameter) measured,

SF7 - code of particle, to which the parameter refers,

SF8 - modifier,

SF9 - code of data type.

According to EXFOR rules, some auxiliary fields separated by commas may be omitted.

The dictionary of codes is given in Section II.2.

- ⑤ Первый автор - инициалы и фамилия первого автора работы (при наличии соавторов их данные приводятся в БИБЛИОГРАФИИ (раздел III)).

- ⑥ Общие параметры - 4 строки (COMMON PARAMETERS) для записи дополнительных сведений об условиях эксперимента.

- ⑤ First author - initials and surname of the author of a paper (co-authors if any are indicated in the BIBLIOGRAPHY (Section III)).

- ⑥ Common parameters - 4 rows (COMMON PARAMETERS) to write additional information on the experimental conditions.

В случае отсутствия общих сведений в соответствующих полях таблицы дается код NOCOMMON.

Словарь кодов приводится в разделе II.2.

When there is no such common information the code NOCOMMON is used.

The dictionary of codes is given in Section II.2.

- ⑦ Величины - поле, в трех строках которого (сверху-вниз) указаны код аргумента, функции и ошибки функции, для данных, приведенных в таблице.
- ⑧ Единицы измерения величин, приведенных в таблице - поле, в трех строках которого указаны коды единиц измерения аргумента, функции и ошибки функции для данных, приведенных в таблице.
- Словарь кодов приведен в разделе II.2.
- ⑨ Цифровые данные - поля таблицы, в которых приводятся численные значения аргументов, функций и ошибок функций (значения аргументов отмечены знаком "*" и возрастают слева-направо и сверху-вниз).
- ⑦ Quantities - a field in 3 rows of which given in table (from top to bottom) codes for argument, function and error in function are given for the data tabulated.
- ⑧ Units of measurement of the quantities tabulated - a field in 3 rows of which codes for the units of measurements of argument, function, and error in function for data tabulated are given.
- The dictionary of codes is given in Section II.2.
- ⑨ Digital data - the fields of the table, in which the digital values of arguments, functions and errors in functions are given (values of arguments are asterisked "*", and increase from left to right and from top to bottom).

II.3. Пояснения к графикам

Для построения графиков использовалась специальная программа GRAF, ориентированная на работу с данными в формате EXFOR. Программа работает как с полями BIB (REACTION), так и DATA (DATA-HEAD, DATA-UNIT, DATA, DATA-ERR) соответствующей подработы (SUB-ENTRY) каждой работы (ENTRY).

С целью более удобного (наглядного) представления различных данных, полученных в разных масштабах, использовалась интерполяция по обеим осям графиков.

Вследствие этого графики имеют пространственный характер и не претендуют на абсолютно точное соответствие цифровым данным таблиц.

В случае наличия лишь небольшого (1-3) количества точек данных графики не приводятся.

II.3. Explanations of the graphs

For graphs drawing the special computer code GRAF was used which serve for operating with the data in EXFOR format. The code operate with the fields both BIB (REACTION) and DATA (DATA-HEAD, DATA-UNIT, DATA, DATA-ERR) of appropriate subwork (SUBENTRY) of each work (ENTRY).

With the aid of more comfortable (clear) representation of various data sets obtained in different scales the interpolation for both axes of graphs was used.

In consequence the graphs are only of illustrative character and do not claim on absolute conformity with digital data of appropriate table.

In case of only a few number (1-3) of data records the graphs do not presented.

III. БИБЛИОГРАФИЯ

Библиографические сведения о работах, вошедших в выпуск, приводятся в соответствии с годом публикации (с 1955 по 1982 год).

Номер работы NNN в библиографии соответствует ее номеру LINNN на магнитной ленте TRANS LI01 и в таблицах раздела II.

Сведения о печатных изданиях (в отличие от таблиц, где даются короткие коды формата EXFOR) приводятся в общепринятых обозначениях.

III. BIBLIOGRAPHY

The bibliographic information about the work of issue is given according to the year of their publication (from 1955 to 1982).

The number of a work NNN corresponds to its number LINNN on the magnetic tape TRANS LI01 and to that indicated in tables of Section II.

Information about the publication source is given in conventional symbols (in contrast to tables, where the short EXFOR codes are used).
