JAPANESE LIST OF REQUESTS  
FOR NEUTRON NUCLEAR DATA MEASUREMENTS

January 1975

Compiled by  
WRENDA Working Group of  
Japanese Nuclear Data Committee

日本原子力研究所  
Japan Atomic Energy Research Institute

この報告書は、日本原子力研究所が JAERI-M レポートとして、不定期に刊行している研究報告書です。入手、複製などのお問合せは、日本原子力研究所技術情報部（茨城県那珂郡東海村）あて、お申しこしください。

JAERI-M reports, issued irregularly, describe the results of research works carried out in JAERI. Inquiries about the availability of reports and their reproduction should be addressed to Division of Technical Information, Japan Atomic Energy Research Institute, Tokai-mura, Naka-gun, Ibaraki-ken, Japan.

Japanese List of Requests for Neutron Nuclear Data Measurements

Compiled by

WRENDA Working Group\* of Japanese Nuclear Data Committee

( Received January 11, 1975 )

**Abstract:** Requests for neutron nuclear data measurements are presented. These are compiled by a WRENDA Working Group of Japanese Nuclear Data Committee and submitted to 75WRENDA. This activity is a part of the international cooperation with CCDN, NEANDC and INDC.

## 1. Introduction

Since 1968, Japanese Nuclear Data Committee (JNDC) has compiled request lists for neutron nuclear data measurements<sup>1~3)</sup>. In June 1974, the Committee set up a standing Working Group for screening the domestic requests. The Working Group started with an examination of the old Japanese requests which are compiled in 74WRENDA.<sup>4)</sup>

This report presents the Japanese List of Requests for Neutron Nuclear Data Measurements compiled by the Working Group at the end of 1974, and the list was submitted to the 75WRENDA<sup>5)</sup> through CCDN. The list is composed of the remaining requests from those registered in the 74WRENDA<sup>4)</sup> and the requests newly submitted to the 75WRENDA<sup>5)</sup>. The former requests were left or modified through screening all the Japanese requests presented in the 74WRENDA. In the present list, these are attached with their 74WRENDA registration numbers in parentheses and status comments given in the 74WRENDA. The latter requests are mainly those for neutron capture cross section of fission product nuclides and those for the data of transuranium nuclides.

As for the fission product nuclear data (FPND), the present status of the experimental data was surveyed by the members of FPND Working Group of JNDC. Through their preliminary evaluation work<sup>6)</sup>, they set the criteria for the requests as; (1) the most important quantity for the FPND is the neutron capture cross section in the energy region of 100 eV to 400 keV, (2) nuclides with the highest priority are those with fractional contribution of 3% or more to the total neutron capture by the fission products, and (3) nuclides with no experimental data or with large discrepancies between the data should be remarked.

The requests for the data of the transuranium nuclides are characteristic of the present list of requests. These are for the estimation of the transuranium nuclei in the spent fuel. Though we dropped them from the present list, the requests for the measurements of the reactions H( $\alpha, n$ ), B( $\alpha, n$ ), C( $\alpha, n$ ), N( $\alpha, n$ ), O( $\alpha, n$ ) and F( $\alpha, n$ ) were submitted to the WRENDA Working Group. These data will be used for estimation of the neutron production rate from the compounds blended with the transuranium nuclei.
