MEETING SUMMARY

1. Introduction

The IAEA Technical Meeting on the International Network of Nuclear Reaction Data Centres was held at the IAEA Headquarters in Vienna, Austria from 9 to 12 April 2019. The meeting was attended by 16 participants representing 12 cooperative Centres from eight Member States (China, Hungary, India, Japan, Korea, Russia, Ukraine and USA) and two International Organisations (NEA, IAEA) as well as a participant from (see **Appendix A**). Meetings of this network are held annually, with full meetings involving Centre Heads and technical staff every two years. (The last full meeting was held in May 2018 at the Global Centre for Nuclear Energy Partnership (GCNEP) in Bahadurgarh, Haryana, India.

Main topics of the present meeting were various statistics, manuals and dictionaries, compilation needs, quality control, coding rules as well as software and dissemination (see **Appendix B**). The results of the discussions were summarized in 27 conclusions and 78 actions (see **Appendix C**).

2. Brief Summary

2.1 Opening

A. Koning, Head of IAEA Nuclear Data Section welcomed the participants, and the participants introduced themselves. **M. Fleming** was elected as the chairperson, and the agenda was adopted.

2.2 Progress Reports

Progress reports from all 12 attending Centres were presented by **M. Mikhailiukova**, **V. Varlamov**, **T. Tada**, **S. Taova**, **O. Gritzay**, **A. Koning**, **S.C. Yang**, **S. Takács**, **V. Devi**, **M. Fleming**, **Wang Jiming** and **B. Pritychenko**, who highlighted the staffing, compilation, dissemination and other nuclear data related activities of interest to the network. See progress reports P2019-01 to P2019-11 (**Appendix D**) for further details.

2.3 EXFOR General

N. Otsuka presented the statistics of transmissions, journal scanning and preliminary tape checking. He reported that 448 new entries and 976 revised entries have been newly finalized since the last NRDC meeting.

S. Okumura reported that NDS regularly scans 40 journals since the last NRDC meeting. She emphasized that the journals in NRDC Protocol Appendix B (Scanning responsibility) and not regularly scanned by NDS must be scanned by other centres.

2.4 Manuals and Dictionaries

M. Mikhailiukova proposed a new LEXFOR chapter "Kerma factor", which was approved.

N. Otsuka proposed elimination of the sentence "*the institute determining the compilation responsibility is given first.*" from LEXFOR "Institute", and it was approved.

N. Otsuka demonstrated new web quantity dictionaries which relate the quantity name and REACTION SF3-SF8 (e.g., "Elastic scattering Rutherford ratio" → SF3=EL, SF6=DA and

SF8=RTH) to make EXFOR search for a specific quantity easier for those who are not familiar with the EXFOR rule, and performed demonstration using the JCPRG EXFOR web retrieval system (<http://www.icprg.org/exfor/>).

2.5 CINDA

V. Zerkin reported that automatic updates of CINDA database using the EXFOR and NSR databases have been performed 8 times (from May 2018 to December 2018) after every update of NSR received from NNDC, and a MySQL dump of the complete CINDA database was sent to NNDC (USA), BARC (India), CNDC (China) and “Atomstandart” (Russia).

2.6 EXFOR Compilation Needs

B. Pritychenko reported the result of a cross-check between EXFOR and NSR for references containing fission yield data for spontaneous fission, photofission and neutron-induced fission. **S. Okumura** also reported the result of a cross check between EXFOR and citation lists of ENDF-B/VI (England and Rider) and UKFY3 (Mills) evaluation reports for references containing fission yield data. Participants agreed to put an action to centres for compilation of the fission product yield data identified as missing in EXFOR during these assessments.

O. Gritzay propose a new keyword SUPPL-INF (supplemental information) and coding rules under this keyword for accommodation of supplemental numerical data such as neutron source spectra and neutron detection resolution (response) functions, and they were approved.

2.7 EXFOR Quality Control

V. Varlamov reported that Vestnik Moskovskogo Universiteta – Seriya III, Fizika i Astronomiya (VMU) published in 1948 to 1969 and 1996 to the present do not have volume numbers.

2.8 EXFOR Coding Rule

O. Schwerer reviewed the usage of the keyword RAD-DET and its relation to DECAY-DATA and PART-DET. After summarizing the difference between these three keywords and actual usage of RAD-DET in various EXFOR areas, he discussed relevant paragraphs in the EXFOR Formats Manual and LEXFOR, and also presented examples of good and redundant usage of RAD-DET. He finally proposed participants to check usage of RAD-DET whenever an entry containing this keyword is retransmitted, and to delete this keyword when it is redundant.

O. Schwerer pointed out the use of the branch code M- is confusing in many cases, and proposed to limit its use when it appears as CUM/M-. **N. Otsuka** supported his proposal, and proposed to use the branch code IND only in combination with the parameter code FY. These proposals were accepted after considering the comments on the usage of M- from **S. Takács** and **S.C. Yang**.

M. Mikhailiukova presented the same data set compiled in two subentries 41202.002 (STATUS=CURVE, uncertainties given for all data points) and 41224.002 (STATUS=SCSRS, uncertainties given except for three data points). The participants concluded that EXFOR 41224 will be merged into EXFOR 41202 after deletion of 41224.002.

2.9 Tools for Compilation and Dissemination

G. Pikulina introduced “TRANS mode” implemented in the EXFOR-Editor Ver.4.0. This mode allows users various operations for preparation of a tape (e.g., sorting, ordering, checking, plotting).

V. Zerkin presented and demonstrated recent developments of EXFOR-CINDA-ENDF-IBANDL web database retrieval system and other data services such as plotting of fission product yield related quantities via C4/C5 by ZVView and pdf database statistics.

2.10 Other Business

A. Lewis reported problems in the uncertainty information coded under the keyword ERR-ANALYS progress and proposed use of an uncertainty template for more consistent and complete reporting of the uncertainty information.

T. Zholdybayev reported progress in compilation of data measured by his institute. He reported that five new EXFOR entries were compiled from newly published articles since the last NRDC meeting. He also reported progress in compilation of data published in old articles by scanning (1) the Kazakh journal “Izvestiya of Kazakh Academy of Science” (for creation of four new entries) , and (2) preprints and laboratory logbooks kept in his institute (for revision of ten entries).

Wang Jimin (on behalf of Ge Zhigang) presented the preparation status of the ND2019 conference such as the committee members, statistics of abstracts and conference venue.

2.11 Closing

N. Otsuka proposed the dates and places for the next full NRDC meeting (Vienna, Austria, 18 to 22 May 2020) and the next technical NRDC meeting (Vienna, 2nd quarter of 2021), and they were approved.

The participants reviewed the draft of the Conclusions and Actions.

M. Fleming called an adjournment of the meeting, and the participants thanked for his excellent chairmanship.

CONCLUSIONS AND ACTIONS

Conclusions

General

- C1 The next full NRDC meeting will be held in Vienna, Austria between 18 and 22 May 2020 (4 or 5 days) N.B. 1 July 2020 is the 50th anniversary of the first EXFOR exchange).
- C2 Each Centre will be encouraged to submit an item for addition in the agenda of the planned 50th anniversary session of the next full NRDC meeting (*e.g.*, short presentation about the history of the relation between the centre and NRDC).
- C3 The next technical NRDC meeting will be held in Vienna, Austria in the 2nd quarter of 2021.
- C4 The next EXFOR compilation workshop will be held in Vienna, Austria in the 4th quarter of 2020.

EXFOR Statistics and Coverage

- C5 NNDC will scan each issue of IMP/E, and provide the results to NDS.

Manuals and Dictionary

- C6 Revision of EXFOR Formats Manual “SAMPLE” and LEXFOR “Sums” (CP-D/964=WP2019-08) was approved after replacing “412 keV gamma” with “412 keV prompt gamma”.
- C7 Revision of LEXFOR “Polarization” (CP-D/970=WP2019-09) was approved.
- C8 Addition of LEXFOR “Kerma factors” (4C-4/219=WP2019=10) was approved.
- C9 Revision of LEXFOR “Institute” (CP-D/976=WP2019-11) was approved after the elimination of the sentence “The sequence of the institutes should be the same as in the primary reference.”.
- C10 Two new dictionaries (Dictionaries 114 and 115) are ready for testing by retrieval systems.
- C11 New codes (TER,FY,,RES; CI/ASECMEV; ISP,SIG; ,DA,,RS/TMP) proposed by NEA Data Bank (CP-N/146, 147 and 149=WP2019-13) were approved.
- C12 Creation of Dictionary 38 (Supplemental information) proposed in CP-D/965 Rev=WP2019-21 was approved.

EXFOR Compilation Needs

- C13 Completeness of fission product yields in EXFOR was checked by two independent methods – (1) checking of EXFOR against NSR (CP-C/464, 465 and 466=WP2019-19), and (2) checking of EXFOR against citation lists of evaluation summary by Mills for UKFY and England & Rider for ENDF (WP2019-20).
- C14 New keyword SUPPL-INF (supplemental information) and relevant update of manuals (EXFOR Formats Manual “REACTION” and “SUPPL-INF” as well as LEXFOR “Supplemental information”) proposed in CP-D/965 Rev=WP2019-21 were approved. Note that only two keywords SUPPL-INF and HISTORY are allowed in the BIB section providing the supplemental information.
- C15 The ENDF library community needs an experimental atomic reaction database for validation purposes.

EXFOR Quality Control

- C16 Volume numbers of VMU (Vestnik Moskovskogo Universiteta – Seriya III, Fizika i Astronomiya) are absent for the issues published in 1948 to 1969 and 1996 to the present.

EXFOR Coding Rule

- C17 Revisions of the EXFOR Formats Manual and LEXFOR proposed by Memo CP-C/393=WP2019-27 were approved.
- C18 Redundant information should be included only when there is a good reason specific to the entry. Furthermore, the length of a BIB section should not be increased when neither additional information nor a better explanation is offered - this makes the entry less user friendly. (c.f. CP-C/393=WP2019-27)
- C19 Revision of LEXFOR “Independent and cumulative data” proposed in Memo CP-D/977 Rev. (= WP2019-29 Rev.) was approved.
- C20 The branch code IND will be used only when SF6=FY.
- C21 Revisions of LEXFOR “Data type” and “Delayed fission neutrons” proposed in Memo 4C-3/414 Rev.=WP2019-30 were approved.
- C22 The code coded in REACTION SF2 cannot be repeated in REACTION SF3 (c.f. CP-D/960=WP2019-31).
- C23 The expansion of the status code NCHKD will be “authenticity not confirmed”. The code is used only when there is no other status code applicable (e.g., NDD, SCSRS). However, the data tabulated or plotted by other than the experimentalist will not be compiled in the future. Revision of LEXFOR “Status” proposed by Memo CP-D/973=WP2019-32 was approved.

- C24 Revision of LEXFOR “Ratios” and “Fractional” as well as dictionary updates proposed in Memo CP-D/974=WP2019-33 were approved.
- C25 Conference proceedings published in CEA-CONF, CONF, NBS-SPEC-PUB or STI/PUB report should be coded with the conference code.
- C26 EXFOR 41224 will be merged into EXFOR 41202 after deletion of 41224.002 (4C-4/222=WP2019-35).

Tools for Compilation and Dissemination

- C27 The CNPD EXFOR-Editor has a new function to assemble EXFOR entries to prepare a TRANS tape.
- C28 The EXFOR leaflet was edited by CNPD, which has been printed by CNDC and distributed via the NRDC.
- C29 Compilers are encouraged to inform the NSR compiler(s) if EXFOR entries are deleted or modified in such a way that affects the NSR database.
